C0. Introduction

(C0.1) Give a general description and introduction to your organization.

Wood is a global leader in consulting and engineering across energy and materials. We operate in more than 60 countries, employing around 35,000 people, with revenues of c$5 billion.

With over 160 years of history, Wood is a respected presence in global industrial markets, combining unrivalled technical knowledge and a drive for outstanding delivery. Our operating model is service defined:

Delivering 3 principal services:
- Consulting
- Projects
- Operations

Across 2 broad end markets:
- Energy
- Materials

Our internal organisational structure is aligned to our service defined operating model, with three global business units: Consulting, Projects and Operations. Through these complementary business units we have capabilities that span the entire “green-to-green” asset lifecycle from planning through design, build and operate to repurpose.

Consulting: Specialist consultancy services delivered through a diverse, high-performing team of leading technical experts and project advisors.

Key services include technical consulting, digital advisory and implementation

Projects: Delivering a full suite of solutions for complex, high-value capital investments from concept to design and engineering, project management, procurement, construction management and start-up.

Key services include project management and delivery, engineering design and construction management.

Operations: Management and optimisation of our clients’ assets, including maintenance, modifications, brownfield engineering, asset operations and management through to decommissioning.

Key services include modifications, operations, maintenance and asset management.

Wood is a leader in energy and materials. In energy, in addition to oil & gas, we deliver solutions for many aspects of the energy transition, including decarbonising energy and industrial activity, enabling renewable energy and low-carbon fuels and contributing to the development of new energy policy. Through our wide range of capabilities we deliver solutions for a low carbon future and help our clients achieve decarbonisation targets, from projects that improve efficiency and/or reduce emissions to electrification of assets using renewables energy as well as carbon capture and storage (CCS) and hydrogen. In materials, as well as petrochemicals, we are a leader in processing and production, applying circular economy practices to deliver critical materials sustainably. We deliver solutions for the processing of minerals required for net zero and the energy transition including copper, nickel and lithium and for the production of specialty chemicals including biofuels and e-fuels as well as recycled and eco-friendly materials.

Our Vision: Deliver solutions that transform the world.

3 key market growth drivers underpin our strategy:
- Energy transition
- Net-zero agenda
- Energy security

In September 2022, we disposed of our Built Environment Consulting business providing environmental consulting and sustainable infrastructure development services and representing c14% of group revenue. The reporting boundaries for carbon data in this submission include data from that business up to the date of disposal.

As well as supporting our clients’ net-zero ambitions, we recognise our own responsibility to the environment and our stakeholders to reduce the environmental impact of our operations, be it climate change, waste plastics or ecosystem damage. Our environmental strategy focuses on three key areas:

CDP
Managing risk

Reducing our impact

Raising awareness and competence

We remain committed to managing the impacts of our business through our carbon reduction strategy. Working to an operational boundary in assessing our own carbon emissions, Wood’s Board and ELT regularly review our carbon reduction target to ensure that it remains appropriate. Our internal Climate Change Focus Group, made up of key stakeholders from our functions and operations, continues to deliver the action plans that underpin our carbon reduction strategy for achieving our target.

Our target: To reduce our global scope 1&2 emissions by 40% by 2030 from a 2019 baseline, on our journey towards ‘net-zero’

Our target was developed in 2020 in line with the requirements detailed by SBTi which aligns corporate targets to the goals of the Paris Agreement. We report our full footprint, including scope 3, which is independently verified in line with the requirements of ISO 14064-3. Our intention in 2023 is to advance discussions on a scope 3 reduction goal, in addition to our existing scope 1&2 reduction target.

ESG targets continued to be embedded annual bonus and long-term incentive plans (LTIPs) for Wood’s executive directors and in 2022 and a key measure for the LTIPs in 2023 is performance against our carbon target. This reflects the importance of ESG and our sustainability programme and enables our stakeholders to better assess our non-financial performance both individually and relative to our peers.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data and indicate whether you will be providing emissions data for past reporting years.

Reporting year

Start date

| Scheduled – all meetings | Reviewing and guiding annual budgets | <Not Applicable> | Whilst Wood’s Board as a whole have accountability for sustainability matters, including those related to climate, it has delegated certain responsibilities to a Safety and Sustainability (S&S) Committee. This Committee forms the main channel of communication between management and the Board, meeting four times per year with attendance by the Executive President of Business Sustainability & Assurance who provides regular reports on progress, including updates progress against our climate-related targets. At each Board meeting the Board reviews the activities of each of the following committees, including climate-related aspects as shown:
- S&S Committee - sustainability strategy and performance including performance against climate-related targets which were reviewed and endorsed by the Board at the time of roll-out
- Audit Risk & Ethics – impact of climate issues on principal and emerging risks
- Remuneration Committee – review of performance against climate-related metrics embedded in executive remuneration including the climate-related aspects of each committee’s remit.
In addition, the Board undertakes detailed reviews of our sustainability strategy and performance twice per year as well as a formal review of principal risks twice per year.

The Board receives updates from the Executive Leadership Team (ELT) which is comprised of the Executive Presidents of each business unit and the Executive Presidents of our functions including Business Sustainability & Assurance (covering sustainability and climate matters), People & Organisation, Strategy & Development and Finance & Administration. These updates enable the Board to consider the climate issues related to our strategy (including mergers & acquisitions), and financial planning and performance.

In 2022, the Board:
- Oversaw the development of Wood’s revised strategy for the 2023-2025 cycle which is aligned to two broad end markets of Energy and Materials and is driven by climate-related trends of energy transition, sustainable materials, circular economy and decarbonisation, as well as energy security. The Board also considered a number of strategic options in addition to the refreshed strategy, including M&A
- Considered climate risk through its review of principal and emerging risks and concluded the major impact is on our strategy and therefore feeds into our principal risks of “strategic delivery” and “ESG strategy & performance”
- Reviewed progress against sustainability targets
- Reviewed financial results

C1.2
(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.

**Position or committee**  
Chief Executive Officer (CEO)

**Climate-related responsibilities of this position**  
Managing major capital and/or operational expenditures related to low-carbon products or services (including R&D)  
Managing climate-related acquisitions, mergers, and divestitures  
Integrating climate-related issues into the strategy  
Setting climate-related corporate targets  
Monitoring progress against climate-related corporate targets  
Managing value chain engagement on climate-related issues  
Assessing climate-related risks and opportunities  
Managing climate-related risks and opportunities

**Coverage of responsibilities**  
<Not Applicable>

**Reporting line**  
Reports to the board directly

**Frequency of reporting to the board on climate-related issues via this reporting line**  
More frequently than quarterly

**Please explain**

Our Chief Executive Officer (CEO) sits on the Wood Board as an Executive Director as well as chairing the Executive Leadership Team (ELT). Key responsibilities of the CEO include, amongst others, developing the group strategy for approval by the Board, implementation of Board decisions in respect of the business, ensuring the development of, and compliance by the business with, appropriate policies and procedures and developing and maintaining an effective framework of internal controls over risk in relation to all business activities.

Through these responsibilities, our CEO is responsible at the Board and ELT level for environmental and climate-related issues, including impacts on strategy and risk, as well as policies and procedures. Our CEO signs our Health, Safety, Security, Environment & Sustainability (HSSES) Policy which sets our approach and commitment to managing the HSSES aspects of our business, including climate-related aspects. In addition, our CEO approves Wood’s Sustainability Programme which reports through the Business Sustainability & Assurance function to the ELT, as well as to our Board level Safety and Sustainability Committee, which our CEO also attends.

Wood’s ELT operates under the authority of, and reports directly to the CEO. The ELT meets monthly and comprises of the Chief Executives of each of the Group business units and includes representation from the Executive Presidents of each of the four strategic functional groups (Business Sustainability & Assurance, People and Organisation, Finance and Administration, and Strategy and Development). These meetings provide the CEO with oversight for the climate-related impacts across our business, in particular:

- The Executive President of Business Sustainability & Assurance (EP BS&A) oversees the delivery of the sustainability strategy. They have overall accountability for climate-related actions, including engagement with our supply chain, and risk management and provides regular reports on progress, including updates progress against our climate-related targets.
- The Strategy & Development (S&D) function, led by the Executive President of Strategy & Development, is responsible for business development, including building on growth opportunities in energy transition and decarbonisation which have climate-change as a key driver. Our S&D process continually evaluates our business and the investment opportunities to accelerate delivery against our strategy. As climate-related impacts are a key driver of conditions in our markets and of client requirements these are factored into considerations around such investment opportunities, including M&A and investment in low-carbon services. The S&D function is also responsible for client engagement which includes engaging on ESG and sustainability topics. The CEO also attends Quarterly Business reviews providing oversight of climate matters at a business unit level through reviews of risk registers and progress against strategy.

---

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

<table>
<thead>
<tr>
<th>Provide incentives for the management of climate-related issues</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>Wood has published a set of goals to measure our performance against our sustainability strategy and an ESG framework on performance measures for short and long-term variable incentive plans. Performance against our goals is embedded in annual bonus and long-term incentive plans for Wood’s executive directors, reflecting the importance the Board places on delivering a sustainable value to all of Wood’s stakeholders. To assure achievement outcomes against targets within variable incentives, performance is validated and approved by the Safety and Sustainability Committee of the Board, with a further external audit carried out as appropriate. To view our strategy and goals on sustainability visit: <a href="https://www.woodplc.com/sustainability/strategy-and-goals">https://www.woodplc.com/sustainability/strategy-and-goals</a> Wood also takes pride in celebrating and sharing the achievements of our people; Wood’s Inspire Awards recognition scheme celebrates the incredible efforts of our employees with a specific category for championing sustainability.</td>

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

**Entitled to incentive**  
Chief Executive Officer (CEO)

**Type of incentive**  
Monetary reward

**Incentive(s)**
**Performance indicator(s)**
Progress towards a climate-related target
Reduction in absolute emissions
Increased share of revenue from low-carbon products or services in product or service portfolio
Increased engagement with customers on climate-related issues

**Incentive plan(s) this incentive is linked to**
Both Short-Term and Long-Term Incentive Plan

**Further details of incentive(s)**
In 2022, the CEO's individual performance objectives for the annual bonus plan (short-term incentive) contained ongoing delivery of our sustainability programme and commitments, including engagement with customers and investors to build our sustainability credentials in the market. Our sustainability programme is underpinned by a set of goals to measure our performance against our sustainability strategy, including the delivery of a 40% absolute reduction in scope 1 & 2 carbon emissions by 2030 and the doubling of client support through our services aligned to the energy transition.

Wood's Long Term Incentive Plan (LTIP) applies to Executive Directors (CEO & CFO) and the Executive Leadership Team and is designed to incentivise senior leaders in delivering business performance over the longer-term by providing the opportunity to earn an award in the form of conditional shares. For performance measurement periods from 2021 onwards the LTIP has included a target for reduction in carbon emissions in the performance period which aligns to our overall target of a 40% reduction in scope 1 & 2 emissions by 2030 (measured from a 2019 baseline).

**Explain how this incentive contributes to the implementation of your organization’s climate commitments and/or climate transition plan**
Our sustainability programme incorporates a set of goals to measure our performance against our sustainability strategy, including the delivery of a 40% absolute reduction in scope 1 & 2 carbon emissions by 2030 and the doubling of client support through our services aligned to the energy transition. The inclusion of delivery of the sustainability programme in the CEO's annual bonus plan objectives ensures there is focus on delivering the shorter-term interim actions required to deliver our longer-term targets related to reducing carbon emissions and growing our revenues from low-carbon services aligned to the energy transition.

The carbon emissions target included in the LTIP is directly aligned with our overall target to reduce scope 1 & 2 emissions by 2030, which was developed in 2020 in line with the then requirements detailed by the Science Based Targets initiative.

**Entitled to incentive**

**Entitled to incentive**
All employees
C2. Risks and opportunities

In 2021, Wood introduced a global spot bonus policy allowing individuals or teams to be rewarded financially for outstanding contributions to Wood, sharing in collective success. This provides the flexibility to recognise individuals at any level in the organisation for outstanding contributions to our business including towards the achievement of our sustainability goals such as implementation of local initiatives to reduce emissions or increase energy efficiency, sharing knowledge and best practice on climate-related issues or engaging with our value chain to share best practice or increase the level of low-carbon services we provide to them.

**Explain how this incentive contributes to the implementation of your organization’s climate commitments and/or climate transition plan**

The spot bonus allows us to recognise individuals at any level in the organisation for outstanding contributions to our business including towards the achievement of our sustainability goals including our goals on carbon reduction, the doubling of client support through our services aligned to the energy transition and elimination of single use plastics in our offices. This could include rewarding contributions such as implementation of local initiatives to reduce emissions or increase energy efficiency, sharing knowledge and best practice on climate-related issues across the business or engaging with our value chain to share best practice or increase the level of low-carbon services we provide to them.

**Entitled to incentive**

All employees

**Type of incentive**

Monetary reward

**Incentive(s)**

Bonus – set figure

**Performance indicator(s)**

Implementation of an emissions reduction initiative
Energy efficiency improvement
Increased engagement with customers on climate-related issues
Implementation of employee awareness campaign or training program on climate-related issues

**Incentive plan(s) this incentive is linked to**

Not part of an existing incentive plan

**Further details of incentive(s)**

Wood is on a journey to embed sustainability as simply how we do business. Our sustainability goals provide a framework for our employees to champion sustainability in their location, in line with our collective ambition. We recognise the importance of effecting behavioural change to achieving our goals and emphasise the role everyone in our business has playing their part to contribute to our targets, this includes our goals on carbon reduction, the doubling of client support through our services aligned to the energy transition and elimination of single use plastics in our offices.

We also encourage reporting through our internal sustainability action tracker. The tracker is available to all employees globally and acts as a global repository people to report and track individual and team actions, that contribute to Wood’s sustainability strategy. The tracker provides greater transparency on our reporting, enabling our people to engage with our progress and providing the ability for employees to share best practice. It also enables Wood to track employee efforts so that they can be recognised internally and potentially also externally through inclusion in our annual reports and external disclosures.

**C2. Risks and opportunities**

Wood is on a journey to embed sustainability as simply how we do business. Our sustainability goals provide a framework for our employees to champion sustainability in their location, in line with our collective ambition. We recognise the importance of effecting behavioural change to achieving our goals and emphasise the role everyone in our business has playing their part to contribute to our targets, this includes our goals on carbon reduction, the doubling of client support through our services aligned to the energy transition and elimination of single use plastics in our offices.
(C2.1) Does your organization have a process for identifying, assessing, and responding to climate-related risks and opportunities?
Yes

(C2.1a) How does your organization define short-, medium- and long-term time horizons?

<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>From (years)</th>
<th>To (years)</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short-term</td>
<td>0</td>
<td>3</td>
<td>In 2019, as part of our strategic planning process, we undertook qualitative scenario planning exploring the pace and depth of the low carbon energy transition required to meet Paris Agreement targets and have continued to assess the risks and opportunities throughout our strategic cycle to 2022. As result of these assessments, we identified a comprehensive list of risks and opportunities in our climate change risk register. From this list, we identified the climate-related risks and opportunities that are likely to have the most significant potential effects on our business, strategy and financial planning. Our assessments considered climate related risks and opportunities over short, medium and long-term time horizons, as detailed in our 2022 TCFD report: <a href="http://www.woodplc.com/sustainability/data-and-reporting">www.woodplc.com/sustainability/data-and-reporting</a>. We review climate-related risk on an annual basis and therefore consider 0 to 3 years to be a suitable short-term assessment period. This aligns with our going concern assessment period which covers a period of at least 12 months from the date of approval of the financial statements. Our process for identifying, assessing and responding to climate-related risks and opportunities is incorporated within our enterprise-wide risk management process and framework which feeds into our principal risks and uncertainties reviewed by the Board and the Executive Leadership Team. Climate-related risks are considered as part of the overall process for managing principal and emerging risks. Principal risks are reviewed by the Board twice per year. Emerging risks are identified throughout the year through regular business and functional reviews and escalated to the Board as required.</td>
</tr>
<tr>
<td>Medium-term</td>
<td>3</td>
<td>5</td>
<td>In line with our overall business strategic cycle, sales pipeline and contracting periods, and Wood’s sustainability materiality assessment cycle, we define medium term as between 3 and 5 years. This aligns to the assessment period utilised for Wood’s viability statement which assesses the group’s viability over a period of three years and models the impacts of risks over a five-year period. We determine the scope of medium-term risk to encompass contracting periods, as well as our forecast sales pipeline as part of group wide strategy and growth, aligned to the broad horizon of global sustainability goals. During 2022 we continued to assess the risks and opportunities associated with climate-related matters. As result of these assessments, we identified a comprehensive list of risks and opportunities in our climate change risk register. From this list, we identified the climate-related risks and opportunities that are likely to have the most significant potential effects on our business, strategy and financial planning. Our assessments considered climate related risks and opportunities over short, medium and long-term time horizons, as detailed in our 2022 TCFD report: <a href="http://www.woodplc.com/sustainability/data-and-reporting">www.woodplc.com/sustainability/data-and-reporting</a>. Our process for identifying, assessing and responding to climate-related risks and opportunities is incorporated within our enterprise-wide risk management process and framework which feeds into our principal risks and uncertainties reviewed by the Board and the Executive Leadership Team. Climate-related risks are considered as part of the overall process for managing principal and emerging risks. Principal risks are reviewed by the Board twice per year. Emerging risks are identified throughout the year through regular business and functional reviews and escalated to the Board as required.</td>
</tr>
<tr>
<td>Long-term</td>
<td>5</td>
<td>100</td>
<td>Our long-term horizon considers periods beyond our strategic cycle and extends up to 100 years to account for known historic climate events and the likelihood of future occurrence, as well as applying current scientific knowledge to understand longer term impacts of climate change. Factors considered include, but are not limited to, longer term government policy, advances in technology and innovation, as well as physical climate scenarios. During 2022 we continued to assess the risks and opportunities associated with climate-related matters. As result of these assessments, we identified a comprehensive list of risks and opportunities in our climate change risk register. From this list, we identified the climate-related risks and opportunities that are likely to have the most significant potential effects on our business, strategy and financial planning. Our assessments considered climate related risks and opportunities over short, medium and long-term time horizons, as detailed in our 2022 TCFD report: <a href="http://www.woodplc.com/sustainability/data-and-reporting">www.woodplc.com/sustainability/data-and-reporting</a>. Our process for identifying, assessing and responding to climate-related risks and opportunities is incorporated within our enterprise-wide risk management process and framework which feeds into our principal risks and uncertainties reviewed by the Board and the Executive Leadership Team. Climate-related risks are considered as part of the overall process for managing principal and emerging risks. Principal risks are reviewed by the Board twice per year. Emerging risks are identified throughout the year through regular business and functional reviews and escalated to the Board as required.</td>
</tr>
</tbody>
</table>
Wood defines substantive financial or strategic impact on our business to be where this threatens the group business model and future ability to perform for our stakeholder groups. In assessing climate-related matters we identify the climate-related risks and opportunities that are likely to have the most significant potential effects on our business, strategy and financial planning.

Climate-related risks are considered as part of the overall process for managing principal and emerging risks. From our analysis, climate change risk is not considered to be a standalone principal risk given its diverse nature but regarded as a contributing factor to other principal risks. Principal risks are those that we consider as having the highest potential for impact on our business and strategy and therefore ultimately are the most material from a financial perspective.

Climate change is currently reflected in 3 of Wood’s principal risks.

- Strategic delivery: The ability to deliver on Wood’s new strategy, of which climate-related matters are a core consideration, by effectively addressing the external and internal risks associated with the strategic plan to 2025.
- ESG strategy and performance: Relating to our ESG strategy and performance, including in relation to climate change, impacting our attractiveness as an investment proposition for our employees, investors, lenders, communities, and other stakeholders
- Project execution: Our ability to successfully execute projects safely and to expected quality, on time and within budget, including the impact of physical climate risks

More detail on how climate-related matters are reflected in our principal risks is set out in our 2022 TCFD report: www.woodplc.com/sustainability/data-and-reporting:

Understanding and considering what matters to our stakeholders is an important part of our planning and decision making. We undertake proactive and effective engagement to ensure we consider these stakeholder priorities alongside our own assessments. For information on our stakeholder engagement see p.38 of our 2022 annual report.

Wood’s periodic sustainability materiality assessment is another mechanism to ensure we identify and take action on the issues material to our business and stakeholders. This assessment informs our road map and actions on key topics such as climate matters. Our latest materiality assessment can be found at:
https://www.woodplc.com/sustainability/materiality
(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

**Risk management process**
Integrated into multi-disciplinary company-wide risk management process

**Frequency of assessment**
More than once a year

**Time horizon(s) covered**
- Short-term
- Medium-term
- Long-term

**Description of process**
Wood’s process for identifying, assessing and responding to climate-related risks and opportunities is incorporated within our enterprise-wide risk management process and framework. This framework feeds into our principal risks and uncertainties reviewed by the Board and the ELT. The Wood Risk Management Framework delivers compliance with the UK Corporate Governance Code and aligns with the ISO 31000 principles.

Our group risk management standard is the formal overarching risk management process within Wood that complements current policies and processes across the Group. The purpose of the standard is to:

- Ensure there is a formal, structured and consistent risk management process across Wood
- Identify, mitigate, and manage risks that occur
- Provide visibility over business risks to inform leadership

Our risk framework starts with the analysis of our business and the external environment within which we operate to ensure our approach to assessing risk is current, and that our risk culture can evolve and adapt to the ever-changing risk landscape. A bottom-up and top-down approach is followed to facilitate the risk management process within the organisation laid out in the group risk management framework shown below. During 2022, our enterprise risk management system (BRisk) was upgraded to enhance governance and oversight of the control environment as a key milestone in Wood’s risk management strategy.

Risk registers are developed at an individual contract or project level, escalated to the business grouping (BG) and captured in the Corporate Risk Management system (BRisk) and rolled up into business unit (BU) risk registers, which are reviewed respectively by the BG and BU Leadership Teams every quarter. The physical risks associated with climate change, such as abnormal temperatures and weather, are considered in the contract/project risk registers. Depending on the materiality, these may then be reflected within the Project Execution principal risk at a BG and BU level.

The BU risk registers are subsequently reviewed as part of the Quarterly Business Reviews which are chaired by the Chief Executive Officer (CEO) with attendance by the CFO, the other members of the ELT and the respective BU Leadership Team.

Group level functional risk registers are also maintained with the functional leadership teams reviewing these risk registers twice a year. Group level climate change risks are considered through the ESG risk register which is overseen by the HSSES group function.

Business unit and functional risk registers are then aggregated into a group risk register which is reviewed at least twice per year by the Group Risk Committee (GRC) to ensure that the principal risks, including the various aspects of climate change risk, are identified, agreed, appropriately measured and effectively controlled, while also monitoring emerging risks. The output of the GRC reviews is a summary of the principal risks which is formally reviewed and challenged by the Board twice per year. The Board is responsible for:

- Identifying the nature and extent of the emerging and principal risks faced
- Determining the extent of those risks it is willing to take in achieving its strategic objectives (its “risk appetite”)
- Performing a robust assessment of those risks
- Monitoring and reviewing the risk management and internal control systems and providing oversight of the processes that management follows.

The Board is assisted in this assessment by the Audit Committee and the Safety and Sustainability Committee, who are delegated responsibility for various aspects of risk, internal control and assurance.

Wood’s Risk Management Framework includes a focus on identifying and assessing potential emerging risks, including those related to climate matters. Emerging risks are identified throughout the year via the Business Grouping, Business Unit and functional risk processes and escalated and discussed during the GRC and further escalated to the Board as required. A cross-check is also undertaken against the principal and emerging risks identified by Wood's peer group which helps to inform the mid-year Board discussion on risk. At the half-year and at the year-end, a series of one-to-one interviews are carried out by the President – Group Audit & Risk and the Group Risk VP with each of the non-executive directors to understand their perception of emerging risks. The outputs of these one-to-one interviews are fed into the half-year and year-end GRC and Board risk sessions.

Read more on our group risk framework on p.80 of our 2022 Annual Report and Principal Risks on p.84.

Also, in accordance with provision 31 of the Governance Code the Board assesses the Group’s viability, considering the potential financial and operational impacts of certain principal risks. In 2022, the Group’s viability was assessed over a three-year period to 31 December 2025 and modelled the impacts of the risks over a five-year period to 31 December 2027.

In 2019, as part of our strategic planning process, we undertook qualitative scenario planning exploring the pace and depth of the low carbon energy transition required to meet Paris Agreement targets. During 2022 we continued to assess the risks and opportunities associated with climate-related matters. As result of these assessments, we identified a comprehensive list of both risks and opportunities in our climate change risk register. From this list, we identified the climate-related risks and opportunities that are likely to have the most significant potential effects on our business, strategy and financial planning, with the risks linking into our principal risk. Read more on our 2022 TCFD report: www.woodplc.com/sustainability/data-and-reporting

In addition, we view our own sustainability strategy as an enabler of opportunities to deliver the long term future of our business. The strategy is informed by our stakeholder materiality assessment and focuses on the 10 principles of the UNGC while also seeking to contribute to the 17 Sustainable Development Goals; including our work on climate action. It is approved by our Executive Leadership Team and the Safety and Sustainability Committee of the Board and incorporates our target to reduce our scope 1 & 2 emissions by 40% by 2030 on our journey to net zero, with delivery against this target being overseen by the Board.
### (C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Relevance &amp; inclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Current regulation</strong></td>
<td>Climate-related risks are considered as part of the overall process for managing principal and emerging risks which includes consideration of both existing and emerging regulatory requirements. Given its diverse nature, we regard climate risks not as standalone risks but as a contributing factor to other principal risks. The risk of not effectively addressing our obligations, including regulatory, in respect of climate change is reflected in our principal risk of ‘ESG strategy and performance’. For example, Wood is required to comply with the Companies Act 2006 (Strategic Report and Directors Report) Regulations and the Streamlined Energy and Carbon Reporting (SECR) legislation in respect of reporting carbon emissions and energy consumption. Wood is also subject to Article 8 of the EU Energy Efficiency Directive, in the UK (through the Energy Savings Opportunity Scheme Regulations 2014) and in other EU member states. Failure to comply with obligations such as these could lead to our business becoming an unattractive investment proposition for our employees, investors, lenders, communities, and other stakeholders. Wood’s management system provides the framework for how we manage environmental risks globally, including regulation, and is aligned to IS014001:2015 ensuring our processes are effective and driving continuous improvement in our environmental performance. Our certification covers approx. 30% of our business by headcount and is externally verified by Lloyd’s Register. Those areas not covered by our certification must comply with our minimum environmental standards, which although not certified, have been developed to meet the requirements of the standard. Our standards have been developed following a comprehensive review of Wood’s environmental impacts, commitments and performance, considering environmental best practice, regulatory requirements, environmental incident investigations and learning. The standards are split into two sections: managing environmental risks and reducing our impact on the environment.</td>
</tr>
<tr>
<td><strong>Emerging regulation</strong></td>
<td>Climate-related risks are considered as part of the overall process for managing principal and emerging risks which includes consideration of both existing and emerging regulatory requirements. Given its diverse nature, we regard climate risks not as standalone risks but as a contributing factor to other principal risks. The risk of not effectively addressing our obligations, including regulatory, in respect of climate change is reflected in our principal risk of ‘ESG strategy and performance’. Emerging laws and regulations related to climate risks are managed through our internal management system and risk assessment process. Failure to comply with emerging regulation could lead to our business becoming an unattractive investment proposition for our employees, investors, lenders, communities, and other stakeholders. As a global business, we are mindful of the evolving nature of climate related regulation and factor our operating locations into our risk assessment. For example, as a UK listed company Wood will be subject to evolving regulations that seek to ensure the UK meets its net zero ambitions. However, with operations in over 60 countries, developments in individual countries’ government policy related to climate matters is likely to result in increasing legislation on environmental matters to be factored into our risk management framework process. Wood’s management system provides the framework for how we manage environmental risks globally, including regulation, and is aligned to IS014001:2015 ensuring our processes are effective and driving continuous improvement in our environmental performance. Our certification covers approx. 30% of our business by headcount and is externally verified by Lloyd’s Register. Those areas not covered by our certification must comply with our minimum environmental standards, which although not certified, have been developed to meet the requirements of the standard. Our standards have been developed following a comprehensive review of Wood’s environmental impacts, commitments and performance, considering environmental best practice, regulatory requirements, environmental incident investigations and learning. The standards are split into two sections: managing environmental risks and reducing our impact on the environment.</td>
</tr>
<tr>
<td><strong>Technology</strong></td>
<td>Wood is an enabler of net-zero, providing solutions across decarbonisation, energy transition and materials for a net zero world. We are applying technology and our subject matter expertise to decarbonise activities across all of our markets, including oil and gas, while also helping to advance the energy transition through solutions for clean energy. We recognise the significant role that technology has to play in decarbonisation and delivering the solutions for net zero. Decarbonisation and digitalisation are key growth drivers for our strategy cutting across all of our energy and materials markets. Our principal risk of ‘Strategic Delays’ encompasses the internal and external risks associated with the delivery of our strategy and our ability to leverage these growth drivers, such as the impact of technology. Whilst we have our own proprietary solutions we also continue to explore partnerships with industry peers to unlock and deploy the latest innovations, enabling sustainable growth for Wood and helping our clients achieve their own sustainability goals. For example, Wood is working with long-standing partner, Honeywell UOP, to combine technologies to produce carbon-neutral, and carbon-negative, renewable fuels which could transform the aviation industry in the near-term. Honeywell UOP’s Ecofining™ process converts non-edible natural oils, animal fats and other waste feedstocks into Honeywell Green Diesel™ and Honeywell Green Jet Fuel™, which are chemically identical to their petroleum-based counterparts. Wood’s Steam Methane Reform (SMR) technology is combined with Ecofining to produce biofuels. We are also working with Microsoft on a solution to create the de facto global industry standard for emissions monitoring and developing a digital twin solution for renewable energy to enhance asset efficiency and optimise yields while minimising total expenditure. Going forward we aim to provide detail of our R&amp;D expenditure related to low carbon solutions. Wood is also a member of a number of trade associations, non-profit organisations and government body initiatives that challenge action on driving sustainable climate-related innovation; this allows us to stay abreast of technological advancements through industry and peer consultation and better link our actions to sustainable delivery in the industries we operate.</td>
</tr>
<tr>
<td><strong>Legal</strong></td>
<td>Climate-related risks are considered as part of the overall process for managing principal and emerging risks which includes consideration of both existing and emerging regulatory requirements. Given its diverse nature, we regard climate risks not as standalone risks but as a contributing factor to other principal risks. The risk of not effectively addressing our obligations in respect of climate change is reflected in our principal risk of ‘ESG strategy and performance’. Wood’s mandatory Environmental Standards ensure legal compliance, regardless of the jurisdiction of operation. Wood’s management system provides the framework for how we manage environmental risks globally and is aligned to ISO14001:2015 ensuring our processes are effective and driving continuous improvement in our environmental performance. Wood is a number of a number of trade associations, non-profit organisations and government body initiatives that challenge action on climate related issues. This helps us to keep abreast of current and future legal requirements, while also seeking to influence policy and legal requirements related to sustainable development in the regions we operate. Our work on policy engagement gives insight into policy issues and advancements in environmental legislation. More details on our approach to policy engagement is contained in our responses to C12.3a and details of our trade associations to influence policy and regulation are contained in our responses to C12.3b.</td>
</tr>
<tr>
<td><strong>Market</strong></td>
<td>Climate-related risks are considered as part of the overall process for managing principal and emerging risks which includes consideration of the impacts on our markets. Given its diverse nature, we regard climate risks not as standalone risks but as a contributing factor to other principal risks. Our principal risk of ‘Strategic delivery’ incorporates the risk of energy transition and decarbonisation markets not generating sufficient revenues required to meet the targets of our strategy which could result in a failure to keep pace with client demands and competitive forces in these markets and/or inability to attract or retain the appropriately skilled workforce required to remain competitive in these markets. It also covers the risk of undertaking dirty carbon projects that are inconsistent with Wood’s positioning of pitching to support clients in their pursuit of net-zero and decarbonisation which could impact Wood’s access to capital. Wood has a flexible business model and a long track record of evolving to position our capabilities and technical expertise to take advantage of growth trends and changes in our markets. As part of our strategic process, led by our Strategy &amp; Development function, we carry out a comprehensive strategy review every three years and establish strategic direction at a high enough level to enable agile leadership adjustments leveraging our flexible model, over the strategy horizon to account for evolution in climate related risks and opportunities in our markets.</td>
</tr>
<tr>
<td><strong>Reputation</strong></td>
<td>Reputational risks related to climate matters are reflected in two of our principal risks: ‘Strategic Delivery’ includes the risk of undertaking high carbon projects that are inconsistent with Wood’s positioning of pitching to support clients in their pursuit of net-zero and decarbonisation. This has the potential to impact on our reputation, particularly amongst investors, which could also impact on our access to capital. ‘ESG Strategy and Performance’ includes the risk of failure to meet our carbon targets giving rise to risks of environmental harm and and impacting stakeholder confidence. In addition, our principal risk of ‘Major Litigation’ recognises the risks associated with non-compliance with applicable legislation which could lead to financial exposure, penalties and reputational damage. Ensuring we retain a leading ESG ranking position is one of Wood’s sustainability goals, published on our external website. In addition to third party assessment of our business, we also engage on key voluntary initiatives such as CDP and EcoVadis to ensure we create transparency around climate related issues and maintain our good reputation for the work we do to support climate action.</td>
</tr>
</tbody>
</table>
Acute physical Relevant, always included
With a global portfolio of locations, Wood's offices and facilities are increasingly at risk from severe storms, heat and fires which may lead to increasing risk to our people living, working and travelling to and from affected areas, damage to facilities, disruption to operations downtime and lost productivity. This may also affect insurance cover which may become more expensive, restricted or unavailable. This is reflected in our principal risk of 'Project Execution' which reflects the impacts of failure to successfully execute projects safely and to expected quality, on time and within budget.

Localised events arising from physical climate-related risks such as those from abnormal temperatures and weather are reflected in project risk registers. Climate related issues, including acute physical risks are factored into Wood's business continuity process and application of our global mandatory Business Continuity Management Standard. The standard ensures our business is both prepared and responsive to any adverse events that may threaten continuity of our business operations. We also use an internal weather risk modelling tool to assess the probabilistic impacts and inform contracting terms.

As a relatively recent example of incidents affecting business continuity, in 2017 tropical storm Harvey caused flooding to the roads surrounding our location in Houston making it inaccessible to employees for a number of days, causing significant business interruption. Fortunately, all of our employees remained safe, but many lost their homes, vehicles. Events like these influence risk discussions at both a group and project level.

Chronic physical Relevant, always included
Chronic physical risks such as longer term shifts in climate patterns are likely to impact on our market drivers and therefore the are described in detail in the Market risk section above. As well as the impact on market risk, long term changes in weather patterns also represent market opportunities for Wood as it is likely to drive or accelerate investment in energy transition and efficiency. This provides Wood with opportunities to deliver growth in areas such as hydrogen, carbon capture, renewables and decarbonisation activity and to diversify our client portfolio.

C2.3

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?
Yes

<Not Applicable>

Company-specific description
In line with investor and lender commitments to 'Net Zero' there is a growing use of investment exclusions and commitments to exit certain high carbon activities within their portfolios. Undertaking high carbon projects, that are inconsistent with Wood’s positioning of pivoting to support clients in their pursuit of net-zero and decarbonisation, may result in a loss of investor confidence, exposing Wood to disinvestment in the fossil fuel industry and impacting Wood's access to capital. We consider this to be a risk over our short, medium and long-term horizons.

Time horizon
Long-term

Likelihood

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
We have not quantified the financial impact of this risk on access to capital as the future cost of capital will be driven by a wide range of factors and variables such as our future capital requirements and prevailing macro-economic conditions. As such, it is not possible at this stage to quantify the climate-related impacts.

Cost of response to risk

Description of response and explanation of cost calculation
This risk is reflected in our principal risk of 'Strategic Delivery' which recognises the impacts of a lack of ability to deliver on the new strategy as a result of not effectively addressing the external and internal risks associated with the strategic plan to 2025. We have a number of mitigations in place to respond to this risk, in particular, the
implementation of our strategy for the cycle 2023-2025 focused on priority markets including those driven by trends in energy transition, sustainable materials, circular economy and decarbonisation. Our strategy is supported by business unit execution plans and internal metrics/targets and we conduct quarterly business reviews to measure progress against our strategy.

We have not quantified the financial impact of this risk on access to capital or the costs of responding as the future cost of capital will be driven by a wide range of factors and variables such as our future capital requirements and prevailing macro-economic conditions. As such, it is not possible at this stage to separately quantify the climate-related impacts.

Primary potential financial impact
Decreased access to capital
In addition to our business strategy aligned to enabling our clients to transition to a low carbon economy, we recognise our responsibility to conduct our own business in a way that contributes to the energy transition. Our sustainability strategy contains the plans required for our own transition including our carbon emissions reduction target. We have committed to reducing our scope 1 and 2 carbon emissions by 40% by 2030, from a 2019 baseline of 173,585 tonnes CO2e. This target forms the foundation of our plans to transition to a low-carbon economy and is the driver for group-wide strategic actions.

Failure to effect the behavioural change required to meet our carbon target, through lack of engagement, investment and/or accountability, may give rise to risks of environmental harm as well as loss of stakeholder confidence which could impact our access to capital. We consider this to be a risk over our short, medium and long-term horizons.

**Time horizon**
Long-term

**Likelihood**
Very likely

**Magnitude of impact**
High

**Are you able to provide a potential financial impact figure?**
No, we do not have this figure

**Potential financial impact figure (currency)**
<Not Applicable>

**Potential financial impact figure – minimum (currency)**
<Not Applicable>

**Potential financial impact figure – maximum (currency)**
<Not Applicable>

**Explanation of financial impact figure**
This is a multi-dimensional financial impact tied a wide range of factors including the reputational impact:
- for client relationships, as clients increasingly look for alignment with their own climate objectives within their supply chain
- for employees/prospective employees and their desire to work for a purposeful organisation that is taking climate action
- for financial stakeholders (including shareholders and lenders) as they increasingly consider delivery against climate targets in investment decisions the terms of some of our existing debt facilities are linked to ESG KPIs, including our carbon target.

Given the potential wide ranging impacts of this risk it is not possible to quantify the financial impact at this stage.

**Cost of response to risk**

**Description of response and explanation of cost calculation**
This risk is reflected in our principal risk 'Project execution' which recognises the impacts of our ESG strategy and performance not addressing our environmental, social and governance responsibilities effectively, including in relation to climate change. We have a number of mitigations in place to respond to this risk including the development of sustainability plans at business unit level to complement existing group level plans and embed accountability for achieving targets throughout the business and oversight by the Board and Safety & Sustainability Committee to monitor progress towards our targets.

There is potential for elements of our carbon reduction strategy to result in incremental costs, such as switching to the procurement of energy from renewable sources. However, these are not considered to be significant and the actions to date have been relatively low cost or cost neutral.

**Comment**
N/a

**Identifier**
Risk 4

**Where in the value chain does the risk driver occur?**
Direct operations

**Risk type & Primary climate-related risk driver**
Emerging regulation
Carbon pricing mechanisms

**Primary potential financial impact**
Increased indirect (operating) costs

**Climate risk type mapped to traditional financial services industry risk classification**
<Not Applicable>

**Company-specific description**
Carbon related reporting and regulation and carbon tax schemes present incentives to cut Green House Gases (GHG) emissions cost-effectively through reputational and financial drivers. However, compliance with them can also present significant administrative burdens for organisation. As a company listed on the London Stock Exchange, Wood is required to comply with the Companies Act 2006 (Strategic Report and Directors Report) Regulations and the Streamlined Energy and Carbon Reporting (SECR) legislation in respect of reporting carbon emissions and energy consumption. Wood is also subject to Article 8 of the EU Energy Efficiency Directive, in the UK (through the Energy Savings Opportunity Scheme Regulations 2014) and in other EU member states.

Current and emerging regulation presents the risk of increasing carbon management costs, including administrative costs of compliance with carbon related reporting and regulation and increasing carbon taxation. We consider this to be a risk over our short, medium and long-term horizons.
Very likely

Magnitude of impact
Medium

Are you able to provide a potential financial impact figure?
No, we do not have this figure

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
The cost of complying with existing regulation is primarily included within our group functions overhead costs, given the wide ranging activities of the relevant group and is not possible to determine the climate-related costs separately.

In addition, the financial impact, both direct and indirect (e.g. administrative costs of compliance), of emerging regulation will depend on the nature and extent of such regulation and therefore the scale of processes and resources required to be put in place to comply. Given these variables it is not possible to quantify the financial impact at this stage.

Cost of response to risk

Description of response and explanation of cost calculation
Wood utilizes its internal group functions, to ensure compliance with current regulation and to ensure preparedness for emerging regulation. We develop and implement policies and requirements within the company to reduce emissions and therefore reduce the potential direct costs from emerging regulation such as carbon pricing. Our environmental standards set minimum requirements to which the business must work and incorporate carbon and emission management and reduction as well as other environmental aspects.

The cost of this response is predominantly labour costs to the business, sitting within our overhead liability. Given the wide ranging activities of the relevant group and is not possible to determine the climate-related costs separately.

No, we do not have this figure

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
The cost of complying with existing regulation is primarily included within our group functions overhead costs, given the wide ranging activities of the relevant group and is not possible to determine the climate-related costs separately.

Cost of response to risk

Description of response and explanation of cost calculation
Wood utilises its internal group functions, to ensure compliance with current regulation and to ensure preparedness for emerging regulation. We develop and implement policies and requirements within the company to reduce emissions and therefore reduce the potential direct costs from emerging regulation such as carbon pricing. Our environmental standards set minimum requirements to which the business must work and incorporate carbon and emission management and reduction as well as other environmental aspects.

The cost of this response is predominantly labour costs to the business, sitting within our overhead liability. Given the wide ranging activities of the relevant group and is not possible to determine the climate-related costs separately.

<td>The potential financial impact depends on a wide range of factors such as the nature and scale of potential disruption, contractual coverage for downtime and the availability and cost of insurance. Given these variables, it is not possible to quantify the financial impact at this stage.</td>
</tr>
</tbody>
</table>

Cost of response to risk

Description of response and explanation of cost calculation
This risk is reflected in our principal risk 'Project execution' which recognises the impacts of failure to successfully execute projects safely and to expected quality, on time and within budget. We have a number of mitigations in place to respond to this risk including:
- an internal weather risk modelling tool used to assess the probabilistic impacts and inform contracting terms
- processes for ongoing monitoring of contracts which carry higher risk of physical climate-related impacts, including quarterly business unit project governance meetings attended by the CEO, CFO and the business unit Executive Presidents.

The cost of this response is predominantly labour costs to the business, sitting within our overhead liability. Given the wide ranging activities of the relevant group and is not possible to determine the climate-related costs separately.

**Potential financial impact figure (currency)**
- <Not Applicable>

**Potential financial impact figure – minimum (currency)**
- <Not Applicable>

**Potential financial impact figure – maximum (currency)**
- <Not Applicable>

**Explanation of financial impact figure**
We have not quantified the financial impact of this the future cost of capital will be driven by a wide range of factors and variables such as our future capital requirements and prevailing macro-economic conditions. As such, it is not possible at this stage to separately quantify the climate-related impacts of potential increased access to capital.

**Cost to realize opportunity**

**Strategy to realize opportunity and explanation of cost calculation**
Our strategy to realise this opportunity is encompassed in one of our sustainability goals, which is to consistently rank in the Top Quartile ESG investment ratings within our sector by 2025. To achieve this we are focused on continuous improvement in disclosures of ESG matters including those related to climate, ensuring that our disclosures respond to the evolving requirements and expectations of our stakeholders. In 2022, a key part of this was the launch of the sustainability hub on our website, drawing together information on our approach to sustainability including strategy, governance, policies and key data. We also published our first standalone TCFD report: https://www.woodplc.com/__data/assets/pdf_file/0026/236645/Wood-TCFD-report-final.pdf

Wood also continues to increase transparency in external disclosures against the Global Reporting Initiative (GRI) in line with investor engagement. We utilise the approach of GRI to increase investor knowledge and confidence on Wood’s climate change approach.

In 2022, John Wood Group PLC received a rating of AA (on a scale of AAA-CCC) in the MSCI ESG Ratings assessment. This represents an eighth consecutive year of being awarded a “AA Leader” rating, placing Wood within the top 25% for Energy, Equipment and Services.

The cost of the strategy to realise this opportunity is predominantly labour costs largely within our group functions, sitting within our overhead liability. Given the wide ranging activities of the relevant group and is not possible to determine the climate-related costs separately.

Attach any relevant documents which detail your climate transition plan (optional)
<Not Applicable>

Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world and any plans to develop one in the future
As a provider of consulting and engineering solutions in energy, materials and in 2022, sustainable infrastructure markets, climate-related risks and opportunities are core considerations of our business strategy. In 2022, climate-related matters including the energy transition and the adaptation towards low carbon and climate resilient infrastructure were key growth drivers underpinning our strategic direction. As part of our strategic planning process, we undertook qualitative scenario planning in 2019 to explore the pace and depth of the low-carbon energy transition required to meet Paris Agreement targets and have continued to assess the risks and opportunities throughout our strategic cycle to 2022.

As well as key driver of our business strategy, alignment with the objectives of the Paris Agreement the foundation of our sustainability strategy driving our own actions. Wood’s current carbon reduction goal was developed in 2020 in line with the then requirements detailed by the Science Based Target initiative (SBTi) which aligns corporate targets to the goals of the Paris Agreement. Our target is aligned to a well below 2-degree temperature rise but has been developed across a ten-year timeframe rather than the maximum 15 years, taking our target closer to a 1.5°C scenario.

Wood is tracking the progress of the UK Transition Plan Taskforce (TPT) guidance with both the Framework and Guidance documents still under consultation, as such our intention is to formalise our transition plan in line with the requirements of the UK TPT. In the meantime, we have been making progress in a number of areas that will set the foundations for the publication of a formal transition plan. Wood has previously developed a Climate Transition Plan which underpins a term loan that is 80% guaranteed by UK Export Finance as part of the UK’s first Transition Export Development Guarantee signed by UKEF. In addition, in 2022 we focused on increasing transparency in our reporting against the recommendations of the Taskforce on Climate-related Financial Disclosures (TCFD) and published a standalone report (available on our website) which sets out in detail the impact of climate-related risks and opportunities on our strategy. Going forward we will build on these and our revised strategy driven by trends in energy transition, sustainable materials, circular economy and decarbonisation, to formalise our transition plan in line with the requirements of the UK TPT.

Our refreshed 2023-2025 strategy rolled out in late 2022 will form the foundation of this scenario planning.</td>
</tr>
</tbody>
</table>

(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

Row 1

Focal questions

In 2019 and 2020, as part of our strategic planning process, we undertook qualitative scenario planning exploring the pace and depth of the low-carbon energy transition required to meeting Paris Agreement targets. Aligned to our strategic focus for the cycle to 2022, on energy transition and sustainable infrastructure development we asked the following focal questions:

Energy Transition

Focal Question: “To what extent will energy source provision, distribution and demand change in the World over the next 15 years?”

This broad question encompassed a wide range of issues to consider as part of the working teams research and discussion, exploring the depth and speed of energy transition, ultimately feeding back into our strategic purpose and principal risks and uncertainties.

Sustainable Infrastructure Development

Focal Question: “How will urban infrastructure evolve over the next 15 years?”

We believe the majority of infrastructure spending in the next 15 years is likely to flow into urban areas, as such this question considered the most critical uncertainties affecting the future of urban infrastructure, including climate-related matters such as sustainability and climate resilience in infrastructure.
Results of the climate-related scenario analysis with respect to the focal questions

Energy transition focal question: “To what extent will energy source provision, distribution and demand change in the World over the next 15 years?”

Our team explored two major uncertainties to create four scenarios:
1. Degree of alignment across key stakeholders, i.e. social, government, investors and businesses
2. Rate of innovation and the adoption of renewable and low carbon energy

Using these uncertainties our scenario planning identified four scenarios:

- Tailwind: (A1) Aligned social, economic & political world (B1) Rapid technological innovation & deployment
- Turbulence: (A2) Polarised social, economic & political spectrum (B1) Rapid technological innovation & deployment
- Headwind: (A1) Aligned social, economic & political world (B2) Incremental technology development & adoption
- Doldrums: (A2) Polarised social, economic & political spectrum (B2) Incremental technology development & adoption

Sustainable infrastructure development focal question: “How will urban infrastructure evolve over the next 15 years?”

Our scenario work focused primarily on cities as the main driver of urban infrastructure transformation and identified two major uncertainties:

1. Ability of cities to generate wealth and release capital
2. Depth of society’s connectedness to data and technology

Using these uncertainties our scenario planning identified four scenarios:

- Ember’s scenario: A world where investment and social cohesion steadily decline and there is little progress in firing up the mechanisms needed to drive sustainable infrastructure.
- Flecks scenario: A world where investment is lacking, but people generally embrace technology and share data to improve their lives.
- Beacons scenario: A world where investment is unlocked, but people are generally resistant to sharing their personal data or embracing technology.
- Blaze scenario: A world where investment is unlocked, and people generally embrace technology and share data to improve their lives.

As results of these assessments, we have identified a comprehensive list of risks and opportunities in our climate change risk register and the top five risks and opportunities related to climate change are shown in our annual report and accounts 2022 page 58 and our 2022 TCFD report. In addition, they are informing our actions as we continue to execute our business plans and refine our strategy. Specifically, these are:

- Ensuring our business is financially resilient across a range of market scenarios with respect to the pace, scope and scale of energy transition changes
- Enabling our business model resources to be optimised in response to specific short to near-term market and geographical opportunities
- Supporting our clients with differentiated service offerings, engineering solutions and delivery capabilities to help them meet their individual climate-related net-zero targets and low-carbon product needs

C3.3
### C3.4 Describe where and how climate-related risks and opportunities have influenced your strategy.

<table>
<thead>
<tr>
<th>Products and services</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>As a provider of consulting and engineering solutions in energy, materials and in 2022, sustainable infrastructure markets, climate-related risks and opportunities are core considerations of our business strategy. Our 2019 scenario planning analysis has informed our strategic planning throughout our strategic cycle to 2022. This has guided our focus on growth markets in energy transition and decarbonisation and our actions to ensure we have the appropriate management and teams in place and to form strategic partnerships to develop the solutions required to respond to climate change. Through these strategic actions we aim to ensure that Wood benefits from opportunities (as reported in C2.4a) from increased client scope for energy transition and decarbonisation services as well as manage the risks (as reported in C2.3a) of undertaking high carbon projects and not meeting our revenue generation targets for energy transition and decarbonisation work. Wood has a flexible business model and a long track record of evolving to position our capabilities and technical expertise to take advantage of growth trends and changes in our markets. As part of our strategic process we carry out a comprehensive strategy review every three years and establish strategic direction at a high enough level to enable agile leadership adjustments leveraging our flexible model, over the strategy horizon to account for evolution in climate-related risks and opportunities in our markets. Our strategic actions throughout 2022 consisted of focusing on growth opportunities from energy transition and the adaptation towards low carbon and climate resilient infrastructure and as a result, reducing carbon intensity is a feature of almost all of the contracts we are delivering today. This influence of climate-related matters on our strategy is reflected in our target to double client support aligned to the energy transition and more sustainable infrastructure by 2030. This target was established in 2020 and going forward will be updated to reflect our revised strategy rolled out in late 2022.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Supply chain and/or value chain</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>As a global business operating in over 60 countries and in a range of markets, Wood has a diverse supply/value chain. From a strategic perspective we aim to ensure we form strategic partnerships within our value chain to develop the solutions required to respond to climate change. For example, we are working with Microsoft on a solution to create the de facto global industry standard for emissions monitoring. Our operations rely on flexible and responsive supply chain partners to help deliver to our clients safely, on time, within budget and to the quality standards we and our clients expect. Ensuring we adequately assess our supply chain in relation to climate vulnerability is vital to ensure we continue to deliver to our clients. We conduct rigorous supplier risk assessment and screening procedures, audit questionnaires and ongoing monitoring and review to ensure we take detailed risk mitigation steps, including those related to climate issues. It is also important to us that our supply chain partners support our climate-related objectives. Our supply chain code of conduct requires our suppliers to support and contribute to Wood’s net-zero targets as well as minimising the environmental impact of their own operations. We also recognise the importance of working together to achieve and as such undertake regular engagement with our suppliers. In 2022 this took the form of the deployment of carbon training to our tier 1 suppliers to inform and build awareness on the need for climate action and where they can play their part. We believe this is an important step to lay the foundations to address our scope 3 footprint in the future. We have also taken a number of strategic actions within our supply chain in order to address our own climate impacts. For example, we are focused on ensuring increased efficiency specifications on the procurement of new real estate and we are taking action to switch our energy procurement to certified renewable energy sources.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Investment in R&amp;D</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>We recognise the significant role that technology has to play in decarbonisation and delivering the solutions for net zero. Decarbonisation and digitalisation are key growth drivers for our strategy cutting across all of our energy and materials markets. Particularly within our Consulting business unit we are contributing to technology development for net zero solutions such as hydrogen, carbon capture and storage, sustainable aviation fuel and plastics recycling, as well as developing decarbonisation digital solutions. As examples, we are working with Microsoft on a solution to create the de facto global industry standard for emissions monitoring and developing a digital twin solution for renewable energy to enhance asset efficiency and optimise yields while minimising total expenditure. Going forward we aim to provide detail of our R&amp;D expenditure related to low carbon solutions. The Group claims research and development tax credits in the UK, US and Canada. These credits are similar in nature to grants and are offset against the related expenditure category in our income statement. The credits are recognised when there is reasonable assurance that they will be received, which in some cases can be some time after the original expense is incurred. Going forward we aim to provide detail of our R&amp;D expenditure for these schemes that relate to low carbon solutions.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Operations</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>In addition to our business strategy aligned to enabling our clients to transition to a low carbon economy (as outlined in ‘Strategy’ above), our sustainability strategy contains the plans required for our own transition. It is in the delivery of our sustainability strategy where we currently see the main influence of climate-related matters on our operational approach. We have committed to reducing our scope 1 and 2 carbon emissions by 40% by 2030, from a 2019 baseline of 173,585 tonnes CO2e. This target forms the foundation of our plans to transition to a low-carbon economy and is the driver for group-wide strategic actions including: - Real Estate occupancy efficiency - Through rationalising our real estate portfolio to reduce square footage and increase workplace density, we can reduce the carbon emissions associated with the operation of our buildings. Building on our experience of the Covid-19 pandemic, we have been able to maintain employee productivity for some types of occupations in a hybrid and virtual work environment thereby enabling some real estate rationalisation. However, we recognise there is an inevitable scope 3 carbon emissions impact associated with remote and hybrid working that we will need to find ways to mitigate. In addition to rationalising our real estate portfolio, we are focused on ensuring increased efficiency specifications on the procurement of new real estate. - Renewable energy procurement - We are taking action to switch our energy procurement to certified renewable energy sources. By the end of 2022, 55% of our total purchased electricity was from certified renewable sources and we expect this to increase further, to around 60%. In addition to this we are incorporating the delivery of our target into leadership remuneration policies. We also see influence on our operations in the form of mitigations to address the impact of physical climate risks on our business such as ensuring appropriate contract terms and ongoing monitoring of projects that carry higher risk of physical risks.</td>
</tr>
</tbody>

Does this target cover any land-related emissions?
No, it does not cover any land-related emissions (e.g. non-FLAG SBT)

% of target achieved relative to base year [auto-calculated]
162.707031137483

Target status in reporting year
Underway

Please explain target coverage and identify any exclusions
Our target is a company-wide target for an absolute reduction in scope 1 & 2 emissions by 40% by 2030, using an operational control boundary.

Scope 3 is not currently included in our target. We very recently commenced reporting of scope 3, with our carbon year to 30 September 2021 being the first year of reporting. We took this step to provide greater transparency over the drivers of these emissions. This has allowed us to initiate foundations during 2022 that will, in the future, help us to address our scope 3 footprint and support our ambitions to set a scope 3 target in the future.

Our target has been developed in line with the requirements detailed by the Science Based Target Initiative (SBTi). Wood aspires to gain validation of our science based carbon reduction target through SBTi, however, on 3 July 2022, SBTi published new qualifying criteria which omit Wood from obtaining approval; namely Wood derives greater than 50% of its revenue from precluded activities. We will continue to monitor progress by SBTi on the formulation of guidance for the oil and gas sector and seek to re-engage with them, however, at present service companies are excluded from the remit of the guidance in development.

Plan for achieving target, and progress made to the end of the reporting year
In 2022, our scope 1 and 2 carbon emissions were 60,611 tonnes CO2e. This is a reduction of 65% compared to our 2019 baseline and represents reduction of 20% from the prior year (2021). The reduction in 2022 includes the impact of actions undertaken in line with our carbon reduction strategy such as increasing energy efficiency in our real estate portfolio but also due to the sale of the Martinez power plant in California and reduced activity, particularly in our Projects business unit. We continued to make progress in the purchase of renewable energy across the business. We worked with clients and stakeholders to target high electricity users and source renewable tariffs. As a result, around 55% of the electricity we use is now from certified renewable energy sources.

The reduction in our emissions to date has been achieved without the use of carbon offsets.

Dedicated budget for energy efficiency

Our budget for energy efficiency activities within the group is allocated through group wide functional and operational overhead allocation. Efficiency measures are predominantly led by our real estate function but proactively driven by our sustainability programme and strategic ambitions. In 2022, our Climate Change Focus Group, made up of key stakeholders from our operations and functions, continued to be the driver behind delivering the action plans that underpin our carbon reduction strategy for achieving our target. During 2022, these action plans were focused on two key areas:

- Renewable energy procurement
- Energy efficiency in our real estate portfolio

We hope our focus group actions will allow us to better track and report our reduction activities and ensure more robust structure is placed around assigned budgets to align with group and business unit carbon reduction strategies. To date this forum has proved invaluable in connecting stakeholders across Wood and drive action that will help us realise an absolute reduction in group emissions.

Dedicated budget for other emissions reduction activities

Our budget for energy efficiency activities within the group is allocated through group wide functional and operational overhead allocation. Efficiency measures are predominantly led by our real estate function but proactively driven by our sustainability programme and strategic ambitions. In 2022, our Climate Change Focus Group, made up of key stakeholders from our operations and functions, continued to be the driver behind delivering the action plans that underpin our carbon reduction strategy for achieving our target. During 2022, these action plans were focused on two key areas:

- Renewable energy procurement
- Energy efficiency in our real estate portfolio

We hope our focus group actions will allow us to better track and report our reduction activities and ensure more robust structure is placed around assigned budgets to align with group and business unit carbon reduction strategies. To date this forum has proved invaluable in connecting stakeholders across Wood and drive action that will help us realise an absolute reduction in group emissions.

Employee engagement

We recognise the importance of supporting internationally recognised days that help promote issues of global interest and concern. Raising awareness on environmental issues, through the medium of global awareness days, gives us the platform to explain the issues at play, help our employees understand the ‘call to action’ and promote individual responsibility to drive forward action. We observe two main dates in our global calendar of events dedicated to environmental awareness, Earth Day in April and World Environment Day in June.

In addition to these dates, our annual Sustainability Week at the end of September, provides additional opportunity to shine a light on environmental issues and action to support the UN Sustainable Development Goals. We provide a specific budget across our group functional and operational teams to help facilitate employee engagement activities.

We continue to provide employees with awareness training and support on our sustainability ambitions and targets, including our carbon reduction target. We have also developed a suite of awareness material, including a published guide to ‘Taking climate action and reducing your impact’ – which includes suggestions for both work and home reduction actions, set against an impact maturity scale.

Internal incentives/recognition programs

Our global Inspire Awards serve as Wood’s annual platform to formally recognise and celebrate the achievements of our people and the awards include a specific category for championing sustainability.

2022 is the fourth year of our Inspire awards and we took the opportunity to refresh the categories and received over 3,500 nominations from all over our global business. Judging panels, comprised of a diverse group of 23 judges, selecting winners in the categories of:

- Engagement Champion
- Excellence in Sustainability & Ethics
- Exceptional Customer Service
- Exceptional Team Performance
- Impactful Innovation
- Raising the Shield

In 2022, our Excellence in Sustainability & Ethics winner delivered a significant improvement to our Modern Slavery approach within Supply Chain. Previous winners and nominations have looked at carbon reduction initiatives and technologies such as hydrogen and carbon capture, utilisation and storage (CCUS) or reducing the need for the use of helicopters.

Read more about our Inspire Awards and other recognition schemes on page 62 of Wood’s 2022 Annual Report and Accounts.

We provide a specific budget across our group functional and operational teams to help facilitate our inspire awards and other business specific employee engagement/recognition activities.

Dedicated budget for low carbon product R&D

We allocate budget towards the development of innovative low carbon solutions, particularly in our Consulting business which is delivering innovative low carbon solutions to enable net-zero and has digital decarbonisation solutions. This is alongside expenditure on maintaining facilities such as our physical and online CoLab locations. Our CoLab locations are forums aimed at facilitating collaboration amongst the right people in order to co-create the right solution to a defined challenge. Be it with our peers, our clients, or our partners. Through these we are able to foster innovation and develop expertise to advance our strategy that is underpinned by energy transition and decarbonisation.

CoLab - Physical innovation hubs:

- A dedicated space in Houston, and Aberdeen to collaborate and innovate using latest technologies.

CoLab - Online:

- Acting as our innovation management platform, the online CoLab experience, allows our employees to tap into the collective ingenuity of employees, partners and customers to find the best ideas based around specific ‘challenges’, which are issued on CoLab Online and Wood personnel submit ideas on how to best solve.

Virtual CoLab:

- Virtual CoLab allows us to bring peers, clients and partners from across the globe together in a way we couldn’t have imagined previously. CoLab engagements are hosted using an interactive online platform mirroring the process, practices and engagements supported through physical locations.

- We have substantial industry knowledge that is shared across the business, and we work with clients to create innovative solutions. We have active research and development projects in areas such as software development, process design, power plant design, clean energy and we utilise the outcomes to improve current process and practice as appropriate.

The Group claims research and development tax credits in the UK, US and Canada. These credits are similar in nature to grants and are offset against the related expenditure category in our income statement. The credits are recognised when there is reasonable assurance that they will be received, which in some cases can be some time after the original expense is incurred. Going forward we aim to provide detail of our R&D expenditure for these schemes that relate to low carbon solutions.
Do you classify any of your existing goods and/or services as low-carbon products?  
Yes

C4.5a

Provide details of your products and/or services that you classify as low-carbon products.

Description of product(s) or service(s)

Our Consulting business unit provides technical consulting, digital consulting and energy asset and technology solutions throughout the asset lifecycle from advise, design and deliver through to operation and repurposing. Our Consulting business unit has over 60 years’ experience in hydrogen technology licensing (including our proprietary steam methane reformer technology) and our technology is installed in approximately 10% of the existing hydrogen installed plant base. Our services in hydrogen are focused on hydrogen technology, new build and retrofit of hydrogen facilities and hydrogen distribution and storage networks.

Description of product(s) or service(s)

We have a proven track-record in the provision carbon capture and storage (CCS) solutions. In Consulting we provide technical and digital consulting services related to CCS and this business unit we have completed 175 carbon capture and transportation studies. In Projects we provide engineering solutions such as front-end engineering design related to CCS, such as designs for carbon capture plants, and we are currently working with clients on projects that will increase the global capacity of CCS by 20%. For example, Wood has been working with the OGCI CI on Net Zero Teesside to develop the pre-FEED for a new build gas fired combined cycle power station, fully integrated with carbon capture of >90% of emissions for offshore sequestration in the North Sea. This is the anchor project for the first full-chain CCS project in the UK. Our focus is on developing CCS solutions for oil & gas and natural gas facilities, CO2 distribution and storage and expanding the application of our expertise to iron, steel, cement and waste facilities.

We provide a range of services, largely through our Projects business unit, related to facilities for the production of biofuels. This includes engineering design; engineering, procurement and construction management (EPCm) and upgrades and expansions. For example, we are providing EPCm services to a client to expand its renewable diesel biorefinery to increase capacity by 300%.

We are also forming strategic partnerships to combine complementary technologies and expertise to develop solutions for the production of biofuels, such as our partnership with Honeywell to develop sustainable aviation fuels. Wood’s VESTA catalytic methanation technology, powered by a high-performance catalyst from our partner Clariant, enables the decarbonisation of natural gas production by exploiting renewable resources. This process to develop renewable natural gas (RNG) or substitute natural gas (SNG) production has potential applications in the biogas sector.

Wood provides a range of solutions throughout the entire value chain and across all of our energy and materials markets, that are focused on reducing the carbon intensity of our clients’ operations enabling them to meet their own net-zero ambitions. Our solutions include carbon reduction, asset optimisation & efficiency improvements and late life asset solutions & decommissioning. These solutions are complemented by our in-house developed tools and methodologies. For example, together with Microsoft we have created ENVision a cloud monitoring solution to enable real time carbon footprint and emissions monitoring to enable strategic decision making. Our decarbonisation SCORE (Substitute, Capture, Offset, Reduce, Evaluate) methodology can be applied to single or multiple assets, to a client’s full asset portfolio or across a specific geography or region using an evaluation assessment of opportunities to substitute, capture, offset, reduce and evaluate. The methodology is designed to assist clients by providing a roadmap to setting and delivering emissions reduction targets.

**Description of product(s) or service(s)**

Wood provides a range of services throughout the asset lifecycle for systems for the transmission and distribution of electrical energy including from renewable sources. For example, we supported Scottish and Southern Electricity Networks in the upgrade of an overhead transmission line in Scotland. We have also been supporting bp in the deployment of Electric Vehicle Charging infrastructure across UK and Europe.

We provide a range of services, largely through our Projects business unit, related to facilities for the processing of minerals required for the energy transition such battery minerals including lithium and copper. This includes engineering design; engineering, procurement and construction management (EPCm) and upgrades and expansions. For example, we were appointed by Enter Engineering to deliver the front-end engineering design and detailed design on the world’s largest copper concentrator plant in Uzbekistan. Our scope also includes technical assistance during the procurement, construction, commissioning, and start-up stages. Similarly, in Australia we completed our engineering, procurement and construction management (EPCm) work on one of the largest lithium processing projects in the world.

Comment
Wood reports emissions within an operational control boundary, aligning our approach to GHG protocol and methodology.

In 2020, Wood announced a carbon reduction target developed in line with the then requirements detailed by the Science Based Targets initiative. Our target is to reduce our Scope 1 & 2 emissions by 40% by 2030, in line with a well below 2-degree scenario from a 2019 baseline. Our target is aligned to a well below 2-degree temperature rise but has been developed across a ten-year timeframe rather than the maximum 15 years, taking our target closer to a 1.5c scenario than the well below 2c scenario.

Wood aspires to gain validation of our science based carbon reduction target through SBTi, however, on 3 July 2022, SBTi published new qualifying criteria which omit Wood from obtaining approval; namely Wood derives greater than 50% of its revenue from precluded activities. We will continue to monitor progress by SBTi on the formulation of guidance for the oil and gas sector and seek to re-engage with them, however, at present service companies are excluded from the remit of the guidance in development. As we await further sector guidance to be published, we are continue with our approach to align with SBTi requirements in the hope we may apply for future validation. This includes work towards setting a scope 3 target to ensure we have goals set across our full carbon footprint.

In addition, with the 2021 publication of SBTi’s net zero standard, we are working towards setting a net zero roadmap to align to global timelines on net zero.

<td>In 2022, our scope 1 carbon emissions were 38,049 tonnes CO2e. This is a reduction of 18% from 2021. The reduction includes the impact of actions undertaken in line with our carbon reduction strategy such as increasing energy efficiency in our real estate portfolio but also due to the sale of the Martinez power plant in California and reduced activity, particularly in our Projects business unit. Overall, our scope 1 emissions have reduced by 51% compared to our 2019 baseline. The reduction was achieved without the use of carbon offsets.</td>
</tr>
</tbody>
</table>

C6.2

(C6.2) Describe your organization's approach to reporting Scope 2 emissions.

Row 1

Scope 2, location-based
- We are reporting a Scope 2, location-based figure

Scope 2, market-based
- We are reporting a Scope 2, market-based figure

Comment
- Wood reports emissions within an operational control boundary, aligning our approach to GHG protocol and methodology.

- In 2020, Wood announced a carbon reduction target developed in line with the then requirements detailed by the Science Based Targets initiative. Our target is to reduce our Scope 1 & 2 emissions by 40% by 2030, in line with a well below 2-degree scenario from a 2019 baseline. Our target is aligned to a well below 2-degree temperature rise but has been developed across a ten-year timeframe rather than the maximum 15 years, taking our target closer to a 1.5°C scenario rather than the well below 2°C scenario.

- Whilst we report both market and location based scope 2 emissions, we utilise a market-based methodology to report progress against our target to reduce our Scope 1 & 2 emissions by 40% by 2030, from a 2019 baseline. We have chosen a market-based methodology as a key element of our carbon reduction strategy is to transition to procuring electricity solely from renewable sources. Using a market-based methodology allows for a true reflection of the impact on our emissions to be reported.

- Wood aspires to gain validation of our science based carbon reduction target through SBTi, however, on 3 July 2022, SBTi published new qualifying criteria which omit Wood from obtaining approval; namely Wood derives greater than 50% of its revenue from precluded activities. We will continue to monitor progress by SBTi on the formulation of guidance for the oil and gas sector and seek to re-engage with them, however, at present service companies are excluded from the remit of the guidance in development. As we await further sector guidance to be published, we are continue with our approach to align with SBTI requirements in the hope we may apply for future validation. This includes work towards setting a scope 3 target to ensure we have goals set across our full carbon footprint.

- In addition, with the 2021 publication of SBTI’s net zero standard, we are working towards setting a net zero roadmap to align to global timelines on net zero.

<Not Applicable>

Comment
In 2022, our scope 2 LB carbon emissions were 38,504 tonnes CO2e. This is a reduction of 15% from 2021, the reduction includes the impact of actions undertaken in line with our carbon reduction strategy such as increasing energy efficiency in our real estate portfolio but also due to the sale of the Martinez power plant in California and reduced activity, particularly in our Projects business unit. Overall, our scope 2 LB carbon emissions have reduced by 62% compared to our 2019 baseline.

In 2022, our scope 2 MB carbon emissions were 22,562 tonnes CO2e. This is a reduction of 22% from 2021, the reduction includes the impact of actions undertaken in line with our carbon reduction strategy such as increasing energy efficiency in our real estate portfolio but also due to the sale of the Martinez power plant in California and reduced activity, particularly in our Projects business unit. Overall, our scope 2 MB carbon emissions have reduced by 76% compared to our 2019 baseline. We have made significant progress in the purchase of renewable energy across the business. As a result, around 55% of the electricity we use is now from certified renewable energy sources.

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?
No

(C6.5) Account for your organization’s gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services
Evaluation status
Relevant, calculated
Emissions in reporting year (metric tons CO2e)

Please explain
Air, Rail, Hire cars and the use of employees personal vehicles for business purposes. We collect data in two forms:
- Mileage and vehicle category collected. DEFRA emissions factors are used to calculate emissions.
- Volume and vehicle category collected. DEFRA emissions factors are used to calculate emissions.
Employee commuting

**Evaluation status**
Relevant, calculated

**Emissions in reporting year (metric tons CO2e)**
120150

**Emissions calculation methodology**
Distance-based method

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Please explain**
Emissions are based on employee commuting and working from home estimations. Based on the UK employee survey results. Taking a % of the total for each category (i.e. 78% used a car to get to work) and a % of the total for the average number of miles travelled each day. Then, using headcount figures in each country to extrapolate the data set. It was assumed 228 working days in the year.

C7.7

(C7.7) Is your organization able to break down your emissions data for any of the subsidiaries included in your CDP response?

No

C7.9

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Decreased

C7.9a

(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

<table>
<thead>
<tr>
<th>Change in emissions (metric tons CO2e)</th>

C8.2c

(C8.2c) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.
Sustainable biomass

   Heating value
   Unable to confirm heating value

   Total fuel MWh consumed by the organization
   0

   MWh fuel consumed for self-generation of electricity
   0

   MWh fuel consumed for self-generation of heat
   0

   MWh fuel consumed for self-generation of steam
   <Not Applicable>

   MWh fuel consumed for self-generation of cooling
   <Not Applicable>

   MWh fuel consumed for self- cogeneration or self-trigeneration
   <Not Applicable>

   Comment
   Wood do not consume any sustainable biomass.

Other biomass

   Heating value
   Unable to confirm heating value

   Total fuel MWh consumed by the organization
   0

   MWh fuel consumed for self-generation of electricity
   0

   MWh fuel consumed for self-generation of heat
   0

   MWh fuel consumed for self-generation of steam
   <Not Applicable>

   MWh fuel consumed for self-generation of cooling
   <Not Applicable>

   MWh fuel consumed for self- cogeneration or self-trigeneration
   <Not Applicable>

   Comment
   Wood do not consume any other biomass.

Other renewable fuels (e.g. renewable hydrogen)

   Heating value
   Unable to confirm heating value

   Total fuel MWh consumed by the organization
   0

   MWh fuel consumed for self-generation of electricity
   0

   MWh fuel consumed for self-generation of heat
   0

   MWh fuel consumed for self-generation of steam
   <Not Applicable>

   MWh fuel consumed for self-generation of cooling
   <Not Applicable>

   MWh fuel consumed for self- cogeneration or self-trigeneration
   <Not Applicable>

   Comment
   Wood do not consume other renewable fuels.
Coal

Heating value
Unable to confirm heating value

Total fuel MWh consumed by the organization
0

MWh fuel consumed for self-generation of electricity
0

MWh fuel consumed for self-generation of heat
0

MWh fuel consumed for self-generation of steam
<Not Applicable>

MWh fuel consumed for self-generation of cooling
<Not Applicable>

MWh fuel consumed for self- cogeneration or self-trigeneration
<Not Applicable>

Comment
Wood do not consume any coal.

Oil

Heating value
Unable to confirm heating value

Total fuel MWh consumed by the organization
129275

MWh fuel consumed for self-generation of electricity
0

MWh fuel consumed for self-generation of heat
129275

MWh fuel consumed for self-generation of steam
<Not Applicable>

MWh fuel consumed for self-generation of cooling
<Not Applicable>

MWh fuel consumed for self- cogeneration or self-trigeneration
<Not Applicable>

Comment
Wood consumes Gas Oil, Diesel and Gasoline (Petrol).

Gas

Heating value
Unable to confirm heating value

Total fuel MWh consumed by the organization
33494.4

MWh fuel consumed for self-generation of electricity
0

MWh fuel consumed for self-generation of heat
33494.4

MWh fuel consumed for self-generation of steam
<Not Applicable>

MWh fuel consumed for self-generation of cooling
<Not Applicable>

MWh fuel consumed for self- cogeneration or self-trigeneration
<Not Applicable>

Comment
Wood consumes both Natural Gas and LPG.
Other non-renewable fuels (e.g. non-renewable hydrogen)

Heating value
Unable to confirm heating value

Total fuel MWh consumed by the organization
0

MWh fuel consumed for self-generation of electricity
0

MWh fuel consumed for self-generation of heat
0

MWh fuel consumed for self-generation of steam
<Not Applicable>

MWh fuel consumed for self-generation of cooling
<Not Applicable>

MWh fuel consumed for self- cogeneration or self-trigeneration
<Not Applicable>

Comment
Wood do not consume any other non-renewable fuels.

Total fuel
Heating value

Total fuel MWh consumed by the organization
162769

MWh fuel consumed for self-generation of electricity
0

MWh fuel consumed for self-generation of heat
162769

MWh fuel consumed for self-generation of steam
<Not Applicable>

MWh fuel consumed for self-generation of cooling
<Not Applicable>

MWh fuel consumed for self- cogeneration or self-trigeneration
<Not Applicable>

Comment
This is the total of MWh Wood has consumed by fuel which includes, Diesel, Gas Oil, LPG, Natural Gas and Gasoline.

C8.2e

(C8.2e) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in C6.3.

Country/area of low-carbon energy consumption
United States of America

Sourcing method
Default delivered electricity from the grid (e.g. standard product offering by an energy supplier), supported by energy attribute certificates

Energy carrier
Electricity

Low-carbon technology type
Renewable energy mix, please specify (The contract includes TX wind RECs, and purchased renewable energy as part of each utilities specific generation mix.)

Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)
8240

Tracking instrument used
US-REC

Country/area of origin (generation) of the low-carbon energy or energy attribute
United States of America

Are you able to report the commissioning or re-powering year of the energy generation facility?
No

Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)
<Not Applicable>

Comment

Country/area of low-carbon energy consumption
Germany
Sourcing method
Default delivered electricity from the grid (e.g. standard product offering by an energy supplier), supported by energy attribute certificates

Energy carrier
Electricity

Low-carbon technology type
Renewable energy mix, please specify (Acquisition of certificates guaranteed to cover the energy consumed by renewable sources.)

Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)
3.07

Tracking instrument used
Contract

Country/area of origin (generation) of the low-carbon energy or energy attribute
Germany

Are you able to report the commissioning or re-powering year of the energy generation facility?

</tr>
</tbody>
</table>

**Metric numerator**
Percentage of office single use plastic free.

**Metric denominator (intensity metric only)**
% change from previous year
0

**Direction of change**
No change

**Please explain**
To measure our performance in reducing our own climate impacts, in addition to our target to reduce scope 1 and 2 carbon emissions, we have also established a target to reduce consumption of single use plastics in our offices. Our goal is to ensure all Wood offices are single use plastic (SUP) free by 2025. The impact of SUPs on the environment and the role we all play to make more responsible choices to reduce waste is well recognised. Our people are keen to play their part in the action to reverse the impact of SUPs.

In 2022 Wood commenced a process to assess SUP consumption in our offices to attribute a rating according to plastic usage. By the end of 2022, 25% of our offices had been assessed. Currently, 7% are SUP free and 11% are substantially SUP free. Progress to date has been impacted by office closures and hybrid working as a result of the pandemic. Our focus is to ensure all offices owned or leased by Wood have an elimination plan in place in order to achieve our target by 2025.

**Metric numerator**
Revenue

**Metric denominator (intensity metric only)**
% change from previous year
0

**Direction of change**
No change

**Please explain**
Wood's strategy is aligned to growth trends in energy transition, energy security, sustainable materials, circular economy and decarbonisation. As such, we recognise that climate-related matters are a key source of opportunities for our strategy and business. Our key metric for measuring climate related opportunities is the revenue derived from our solutions that help to mitigate the impacts of climate change such as renewable energy, alternative fuels and decarbonising existing energy assets and operations. Our target is to double client support aligned to the energy transition by 2030.

<table>

</tr>
</tbody>
</table>

**Metric numerator**
ESG investment rating (MSCI)

**Metric denominator (intensity metric only)**
% change from previous year
0

**Direction of change**
No change

**Please explain**
We recognise the potential impacts to our business of not effectively addressing our environmental, social and governance responsibilities, including in relation to climate change. We also recognise that our approach to climate-related matters forms a key part of our ESG investment ratings and as such we utilise those ratings as a metric of our performance in this regards.

Our target is to be consistently ranked in the top quartile within our sector by 2025 and we use our MSCI rating and industry/peer group ranking as the measure of our performance.

Since the introduction of our target in 2020, Wood’s ESG performance has consistently been ranked by MSCI as in the top quartile compared to our industry peers. In addition, Wood has maintained a “AA Leader” rating from MSCI for at least 8 consecutive years.

</tr>
</tbody>
</table>

**Please explain the rationale for selecting this group of customers and scope of engagement**

We have a wide range of clients across our board end markets of energy and materials and we undertake regular engagement with them to develop a deep understanding of their challenges. Many of our clients are seeking to manage the climate impacts of their businesses. As such, our strategic focus on delivering solutions energy transition, decarbonisation and the materials required for a net-zero future provides us with significant opportunities to engage with our clients to determine how our solutions could facilitate and support their climate-related plans.

Our regular engagement with clients also enables us to explore opportunities to jointly raise delivery outcomes and co-create value-added solutions. For example, Wood is working with long-standing partner, Honeywell UOP, to combine technologies to produce carbon-neutral, and carbon-negative, renewable fuels for the aviation industry. We are also working with Microsoft on a solution to create the de facto global industry standard for emissions monitoring and developing a digital twin solution for renewable energy to enhance asset efficiency and optimise yields while minimising total expenditure.

The percentage of customers broadly reflects the proportion of Group revenue from projects related to renewables, hydrogen, carbon capture, waste to energy, sustainable fuels and decarbonisation. Our actual engagement with customers on climate-related matters is likely to be far higher as we seek to grow our business in these areas. Our services in these areas are focused on mitigating climate impacts and generally involve innovative solutions and emerging technologies. Sharing information on these products provides not only a commercial advantage for Wood but also enables our clients to build solutions that help tackle climate related issues into their investment decisions.

**Impact of engagement, including measures of success**

As a result of this engagement, Wood has an established position in growing markets related to the energy transition, for example:
- Wood’s consulting business unit has completed 175 carbon capture and transportation studies and our Projects business unit is support clients to increase global carbon capture and storage capacity by 25%
- Wood technology is in around 10% of the existing hydrogen installed plant base
- We completed a world first project enabling oil and gas platforms to be powered by offshore floating wind on the Norwegian Continental Shelf

In 2022 we established a metric to measure the revenue from our sustainable solutions. Going forward the percentage of revenue from sustainable solutions compared to our total revenue will be a valuable measure of the success of our client engagement strategy.

<table>
<thead>
<tr>
<th>Type of engagement &amp; Details of engagement</th>
<th>Other, please specify (Collaboration &amp; project delivery partnerships for low carbon/carbon reduction solutions)</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>% of customers by number</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>% of customer-related Scope 3 emissions as reported in C6.5</td>
<td>0</td>
</tr>
</tbody>
</table>

**Please explain the rationale for selecting this group of customers and scope of engagement**

We have not provided a percentage of customers by number or % of customer-related scope 3 emissions as we are not currently able to measure these. However, Wood is engaged in a number of collaborations and project delivery partnerships for low carbon/carbon reduction solutions. For example, we are partnering with C-Capture on a project to demonstrate feasibility of next generation, low-cost carbon capture solutions in hard-to-decarbonise industries. Wood will conduct feasibility studies at the three UK host sites for implementation of a commercial capture plants and support C-Capture to fabricate modular demonstration carbon capture plants for deployment at the host sites.

We are also working with the Pathways Alliance in Canada to provide engineering services for a significant CCS transportation system involving six of the country’s largest oil sands producers. The Pathways Alliance includes Canada Natural, Cenovus, ConocoPhillips, Imperial Oil, MEG Energy and Suncor.

**Impact of engagement, including measures of success**

Our partnership with C-Capture is in support of their XLR8 CCS project. The multi-industry, multi-million-pound project, will see C-Capture’s unique, next-generation carbon capture technology deployed on numerous sites across the country, within industries that are particularly difficult to decarbonise. Demonstrating that a low-cost, carbon capture technology is a credible solution in reducing carbon emissions. The XLR8 CCS project is designed to accelerate the deployment of a low-cost carbon capture solution for hard-to- abate industries, will deliver feasibility studies and deploy carbon capture solvent compatibility units (CGSCUs) across the cement and Energy from Waste (Efw) and – in a world first – the glass industry.

The distribution system being developed by the Pathways Alliance, along with the required metering and booster stations will gather and transport up to 40 Mt/year of carbon dioxide from more than 20 oil sands facilities by 2050. The project is expected to reduce emissions by over 10 million tonnes a year by 2030.
**C12.1d** Give details of your climate-related engagement strategy with other partners in the value chain.

Our sustainability programme, which includes climate-related matters, focuses on three primary stakeholder groups; our employees, our clients, and our investors. Whilst we prioritise engagement with these groups, we also recognise that climate-related matters incorporate a wider and complex network of different stakeholders spanning geographies, direct business relationships (e.g. supply chain) and indirect relationships (e.g. intergovernmental). Our engagement strategies and methods reflect this wider stakeholder universe enabling Wood to open opportunities, differentiate the Company and manage risk giving confidence to our many stakeholders of our ability to manage, mitigate and eliminate risk. Engagement is built into our business management system including environmental management systems.

Our processes and methods of engagement include:

- Relationship management – including direct engagement e.g. clients, regulators, neighbours
- Partnerships and collaborations – often utilised for innovation development
- Participation in forums, conferences – listening, sharing and trading ideas
- Exhibitions – showcasing environmental technology and innovation
- Social media – sharing content via podcasts, papers through webinars and social media
- Disclosure platforms – including Carbon Disclosure Project and EcoVadis

During 2022, we continued to engage our stakeholders on climate-related matters such as decarbonisation and the wider energy transition agenda. For example, Wood participated in the Energy Chamber of Trinidad and Tobago’s Energy Conference speaking on the energy transition and drivers for business strategy. We also participated at ADIPEC which gave a great platform to discuss various elements of the decarbonisation innovation with clients and peers, we also used podcasts to carry the engagements to a wider audience.

For investors, we undertook an investor perception study during 2022 which sought feedback in areas that touch on climate-related matters such as our strategy (aligned to energy transition and decarbonisation trends) and ESG. We also continued our ongoing engagement with lenders and insurers.

**C12.2**

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization’s purchasing process?

Yes, suppliers have to meet climate-related requirements, but they are not included in our supplier contracts

**C12.2a**

(C12.2a) Provide details of the climate-related requirements that suppliers have to meet as part of your organization’s purchasing process and the compliance mechanisms in place.

**Climate-related requirement**

Other, please specify (Support Wood’s target contribution towards the UN Sustainability Development Goals and ‘Net Zero’ target)

**Description of this climate related requirement**

We require our suppliers to comply with our Supplier Code of Conduct. The code of conduct requires our suppliers to support and, where applicable, contribute to Wood’s target contribution towards the UN Sustainability Development Goals and ‘Net Zero’ target. A commitment to comply with the code of conduct is a condition of acceptance of a supplier during the on-boarding process. We also provide ongoing support to and engagement with our suppliers in this regard. In 2022 we deployed carbon training to our tier 1 suppliers including the development of a Carbon Reduction process and data questionnaire. This helps engage our suppliers in our scope 1 & 2 reduction target and helps to manage our Scope 3 reporting requirements.

We also have a supplier support hub on our website to help facilitate supplier learning and awareness. Our supplier support hub has dedicated training available on the topic of climate change to help tackle awareness in the first instance and familiarization with Wood’s ambition to reduce carbon emissions. [https://www.woodplc.com/sustainability/profit/supplier-support-hub](https://www.woodplc.com/sustainability/profit/supplier-support-hub)

**C12.3**

CDP
(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

Row 1

External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the climate
Yes, we engage directly with policy makers
Yes, our membership of/engagement with trade associations could influence policy, law, or regulation that may impact the climate
Yes, we fund organizations or individuals whose activities could influence policy, law, or regulation that may impact the climate

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?
Yes

Attach commitment or position statement(s)
In our 2022 annual report (https://www.woodplc.com/__data/assets/pdf_file/0030/236685/Wood-Arrival-Report-2022.pdf), page 53 sets out our carbon reduction target which was developed in 2020 in line with the requirements detailed at the time by the Science Based Target initiative (SBTi) which aligns corporate targets to the goals of the Paris Agreement.
Our carbon reduction strategy (https://www.woodplc.com/__data/assets/pdf_file/0027/2152919/Carbon-Reduction-Plan-UK-Gov_22Update_v3.pdf) also sets out the alignment between our targets and the Paris Agreement.

Describe the process(es) your organization has in place to ensure that your external engagement activities are consistent with your climate commitments and/or climate transition plan
Wood's Board as a whole has accountability for our climate commitments but to ensure sufficient and more frequent oversight of Wood's sustainability strategy and performance it has delegated certain responsibilities to a Safety and Sustainability Committee. The meetings of the Safety and Sustainability Committee are attended by Executive President of Business Sustainability & Assurance, who oversees the delivery of the sustainability strategy. The Committee forms the main channel of communication between management and the Board and when combined with the Board's oversight for other key aspects of the business such as strategy and risk management, enables them to ensure the activities of the business are consistent with our climate commitments.
The Executive President of Business Sustainability & Assurance also attends Quarterly Business Review meetings which provides insight into the operational and commercial activities of the business providing an opportunity to identify any activities that are inconsistent with our climate commitments.

Primary reason for not engaging in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate
<Not Applicable>

Explain why your organization does not engage in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate
<Not Applicable>

C12.3a

(C12.3a) On what policy, law, or regulation that may impact the climate has your organization been engaging directly with policy makers in the reporting year?

Specify the policy, law, or regulation on which your organization is engaging with policy makers
Engagement with the UK Department for Energy Security and Net Zero (DESNZ) and Department for Business & Trade on the UK's hydrogen and decarbonisation strategies

Category of policy, law, or regulation that may impact the climate
Climate change mitigation

Focus area of policy, law, or regulation that may impact the climate
Climate transition plans

Policy, law, or regulation geographic coverage
National

Country/area/region the policy, law, or regulation applies to
United Kingdom of Great Britain and Northern Ireland

Your organization’s position on the policy, law, or regulation
Support with no exceptions

Description of engagement with policy makers
Over the last 12 months, Wood has responded to a range of consultations issued by DESNZ. Through these consultation responses we:
o Offered our perspective on how to improve the proposed design for the UK's low-carbon hydrogen certification scheme
o Shared our views on how the second Hydrogen Allocation Round (HAR2) could be optimized to deliver on the government’s 2030 production targets
o Shared our views on how to improve the Industrial Energy Transformation Fund (IETF) and our thoughts on the longer-term role of government funding to help drive on-going decarbonization of UK industrial sectors
In addition, our Executive President of Strategy & Development met with Kwasi Kwarteng, the then Energy Secretary, in the US to outline the work we are currently doing across the country and discuss some of the future growth opportunities for UK companies, particularly tied to delivery of the goals set out through the Inflation Reduction Act.
With the Department for Business & Trade, Wood’s President of Decarbonisation was a key member of an industry and business forum advising Business & Trade Secretary, Kami Badenoch, on opportunities and where focus was required to create a deliverable CCUS Supply Chain development strategy. Our Deputy Chief Financial Officer represented Wood at the government’s set-piece Green Investment Summit in Gateshead, engaging with clients and senior business leaders on investment opportunities in the UK’s energy transition journey.

Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation
<Not Applicable>

Have you evaluated whether your organization’s engagement on this policy, law, or regulation is aligned with the goals of the Paris Agreement?
Yes, we have evaluated, and it is aligned

Please explain whether this policy, law or regulation is central to the achievement of your climate transition plan and, if so, how?
<Not Applicable>

Specify the policy, law, or regulation on which your organization is engaging with policy makers
Engagement with the Scottish Government on growth opportunities in energy transition for Scottish businesses, including export opportunities.
Category of policy, law, or regulation that may impact the climate
Low-carbon products and services

Focus area of policy, law, or regulation that may impact the climate
Other, please specify (Low carbon solutions including hydrogen, carbon capture & storage and decarbonisation)

Policy, law, or regulation geographic coverage
National

Country/area/region the policy, law, or regulation applies to
United Kingdom of Great Britain and Northern Ireland

Your organization’s position on the policy, law, or regulation
Support with no exceptions

Description of engagement with policy makers
We have undertaken a number of engagements with the Scottish Government related to Business, Economy and Trade including:

- Our Executive President of Strategy & Development met with Nicola Sturgeon, the then First Minister of Scotland, to brief her on some of the work Wood is currently doing in the US and discuss some of the future growth opportunities for Scottish headquartered companies, particularly around the energy transition.
- The Executive President of our Projects business unit met with Ivan McKee, the then Minister for Business, Trade, Tourism and Enterprise, to brief him on some of the work Wood is currently delivering in the UAE and outline future export opportunities for UK companies to support the country’s low-carbon transition goals (hydrogen, CCS, decarbonization).
- Wood colleagues held a briefing session with Richard Lochhead, then Minister for Just Transition and Employment, on the work we are doing around Connected Competence and steps required to support reskilling of energy workforce to support low-carbon transition.

We have also engaged with two Scottish Government taskforces. One taskforce focused on identifying collaboration opportunities linked to the US offshore wind programme and the other was a Scotland-Germany taskforce focused on developing a strategy around green hydrogen exports.

Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation
<Not Applicable>

Have you evaluated whether your organization’s engagement on this policy, law, or regulation is aligned with the goals of the Paris Agreement?
Yes, we have evaluated, and it is aligned

Please explain whether this policy, law or regulation is central to the achievement of your climate transition plan and, if so, how?
<Not Applicable>

Specify the policy, law, or regulation on which your organization is engaging with policy makers
Engagement with the European Commission on consultations on green hydrogen strategy and the role of carbon capture and storage in industrial decarbonisation.

Description of engagement with policy makers
Over the last 12months, Wood has engaged with European Commission to respond to the following European Union consultations:

- Shared our views on how to simplify and optimize the Commission’s green hydrogen strategy, particularly the policies around additionality and renewables capacity, to ensure that it does not deter investment in low-carbon hydrogen
- Provided our perspectives on the important role that carbon capture and storage will play in driving industrial decarbonization across Europe, and how the EU can most significantly champion activity across individual member states.

Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation
<Not Applicable>

Have you evaluated whether your organization’s engagement on this policy, law, or regulation is aligned with the goals of the Paris Agreement?
Yes, we have evaluated, and it is aligned

Please explain whether this policy, law or regulation is central to the achievement of your climate transition plan and, if so, how?
<Not Applicable>

Trade association
Offshore Energies UK (OEUK)

Is your organization’s position on climate change policy consistent with theirs?
Consistent

Has your organization attempted to influence their position in the reporting year?
Yes, we publicly promoted their current position

Describe how your organization’s position is consistent with or differs from the trade association’s position, and any actions taken to influence their position
Influencing governments and policy makers is an important part of Offshore Energies UK’s (formerly Oil & Gas UK) day to day work. The legislators set the framework in which the industry must work including licensing, taxation and regulations relating to health and safety and the environment. OUK is seen as the voice of the UK’s offshore industry and has an important role to play in driving change. OUEK have committed to Net Zero by 2035 in the UKCS which will make an important contribution towards reducing the UKCS emissions. OUEK is also driving the O&G sector deal which will have significant climate change objectives included.

Wood is a member of OUEK and engages with the body as we consider their goals to be consistent with our own. For example, OUEK is driving the North Sea Transition Deal which is focused on securing energy jobs, utilising the sector’s skills to help the UK meet its net-zero targets whilst reducing emissions in the sector and promoting lower-carbon solutions.

We support the objectives of OUEK and over the last year, some of our senior leaders have spoke and OUEK’s industry conferences and the Executive President of our Projects business unit joined a panel at OUEK’s Bank of England discussions.

**Describe how your organization’s position is consistent with or differs from the trade association’s position, and any actions taken to influence their position**

The Hydrogen Council is a global CEO-led initiative with a united vision and long-term ambition for hydrogen to foster the clean energy transition. The Council believes that hydrogen has a key role to play in reaching our global decarbonization goals by helping to diversify energy sources worldwide; foster business and technological innovation as drivers for long-term economic growth; and decarbonize hard-to-abate sectors. The Council promotes collaboration between governments, industry and investors, and provides guidance on accelerating the deployment of hydrogen solutions around the world. It also acts as a business marketplace, a resource for safety standards and an interlocutor for the investment community.

As a service provider with a long track record in hydrogen solutions and with proprietary hydrogen technology, Wood supports the aims of the Council and is an active member contributing to the Council’s steering committees (Strategy, Supply Chain Development, Comms & Public Affairs). Wood, as a provider of CCUS solutions, has representation on the board of the CCSA and across two of their steering committees (the Technical Expertise group and the Comms & Public Affairs group). As such, we continue to be an active participant, driving change in this field. For example, Wood has previously provided input through the CCSA on the UK Government’s Department for Business, Energy and Industrial Strategy (BEIS) on the national CCUS strategy.

Describe how your organization’s position is consistent with or differs from the trade association’s position, and any actions taken to influence their position

Making Hydrogen Happen (MHH) is a collaborative, pan industry group of leading organisations from across the hydrogen economy, who are committed to making hydrogen happen in the UK. As a service provider with a long track record in hydrogen solutions and with proprietary hydrogen technology, Wood supports the aims of the organisation and in 2022, we contributed our views to the annual MHH ‘State of the Nation’ survey that provided policy makers with a consolidated view from industry on how the development of the UK’s hydrogen economy was progressing.

<td>Wood has been a signatory member of the United Nations Global Compact (UNGC) since 2009. Our membership confirms our support of the Global Compact ten principles with respect to human rights, labour, environment and anti-corruption and shows our intent to advance those principles within our sphere of influence. We are committed to making the Global Compact and its principles part of our strategy, culture and day to day operations of our company, and to engaging in collaborative projects which advance the broader development goals of the United Nations, particularly the Sustainable Development Goals. We submit an annual communication on progress to the UNGC which describes our efforts to implement the ten principles. We believe that providing this information to the UNGC is vital to help inform their thought leadership on sustainability matters, including climate, which in turn influences public policy internationally.</td>

SC. Supply chain module

SC0.0

(SC0.0) If you would like to do so, please provide a separate introduction to this module.

Wood is a global leader in consulting and engineering across energy and materials. We operate in more than 60 countries, employing around 35,000 people, with revenues of c$5 billion.

With over 160 years of history, Wood is a respected presence in global industrial markets, combining unrivalled technical knowledge and a drive for outstanding delivery. Our operating model is service defined:

**Delivering 3 principal services:**

- Consulting
- Projects
- Operations

**Across 2 broad end markets:**

- Energy
- Materials

Our internal organisational structure is aligned to our service defined operating model, with three global business units: Consulting, Projects and Operations. Through these complementary business units we have capabilities that span the entire “green-to-green” asset lifecycle from planning through design, build and operate to repurpose.
Consulting: Specialist consultancy services delivered through a diverse, high-performing team of leading technical experts and project advisors.

Key services include technical consulting, digital advisory and implementation.

Projects: Delivering a full suite of solutions for complex, high-value capital investments from concept to design and engineering, project management, procurement, construction management and start-up.

Key services include project management and delivery, engineering design and construction management.

Operations: Management and optimisation of our clients’ assets, including maintenance, modifications, brownfield engineering, asset operations and management through to decommissioning.

Key services include modifications, operations, maintenance and asset management.

Wood is a leader in energy and materials. In energy, in addition to oil & gas, we deliver solutions for many aspects of the energy transition, including decarbonising energy and industrial activity, enabling renewable energy and low-carbon fuels and contributing to the development of new energy policy. Through our wide range of capabilities we deliver solutions for a low carbon future and help our clients achieve decarbonisation targets, from projects that improve efficiency and/or reduce emissions to electrification of assets using renewables energy as well as carbon capture and storage (CCS) and hydrogen. In materials, as well as petrochemicals, we are a leader in processing and production, applying circular economy practices to deliver critical materials sustainably. We deliver solutions for the processing of minerals required for net zero and the energy transition including copper, nickel and lithium and for the production of specialty chemicals including biofuels and e-fuels as well as recycled and eco-friendly materials.

Our Vision: Deliver solutions that transform the world.

3 key market growth drivers underpin our strategy:
- Energy transition
- Net-zero agenda
- Energy security

In September 2022, we disposed of our Built Environment Consulting business providing environmental consulting and sustainable infrastructure development services and representing c14% of group revenue. The reporting boundaries for carbon data in this submission include data from that business up to the date of disposal.

As well as supporting our clients' net-zero ambitions, we recognise our own responsibility to the environment and our stakeholders to reduce the environmental impact of our operations, be it climate change, waste plastics or ecosystem damage. Our environmental strategy focuses on three key areas:
- Managing risk
- Reducing our impact
- Raising awareness and competence

We remain committed to managing the impacts of our business through our carbon reduction strategy. Working to an operational boundary in assessing our own carbon emissions, Wood’s Board and ELT regularly review our carbon reduction target to ensure that it remains appropriate. Our internal Climate Change Focus Group, made up of key stakeholders from our functions and operations, continues to deliver the action plans that underpin our carbon reduction strategy for achieving our target.

Our target: To reduce our global scope 1&2 emissions by 40% by 2030 from a 2019 baseline, on our journey towards ‘net-zero’

Our target was developed in 2020 in line with the requirements detailed by SBTi which aligns corporate targets to the goals of the Paris Agreement. We report our full footprint, including scope 3, which is independently verified in line with the requirements of ISO 14064-3. Our intention in 2023 is to advance discussions on a scope 3 reduction goal, in addition to our existing scope 1&2 reduction target.

ESG targets continued to be embedded annual bonus and long-term incentive plans (LTIPs) for Wood’s executive directors and in 2022 and a key measure for the LTIPs in 2023 is performance against our carbon target. This reflects the importance of ESG and our sustainability programme and enables our stakeholders to better assess our non-financial performance both individually and relative to our peers.

We have declined to include a value of revenue per client for privacy reasons. We record scope 1, 2 and 3 emissions, however, we do not currently have the granular detail to determine exact emissions of the services provided to our customers due to the diverse range and nature of our operations. Our methodology in providing this information is a pro-rate calculation based on the revenue from services provided to each client as a percentage of total Wood revenue. This percentage is then applied to our total scope 1, 2 and 3 emissions to determine an estimated share.

Emissions in metric tonnes of CO2e
588.5

Uncertainty (±%) 10
Major sources of emissions
Air travel, Rail travel, non-company vehicle mileage, the well to tank emissions of fuel consumed and the Transmission and Distribution of purchased electricity are all based upon emissions reporting data; we also include direct emissions from our Martinez power plant in California under downstream leased assets, which again is based upon reported emissions data. In addition, as explained in our earlier scope 3 disclosure in CDP, we have estimated other categories of scope 3 emissions based on supplier category spend data in line with recognised methods of calculation. This includes: - Purchased goods and services - Capital goods - Upstream transportation and distribution - Employee commuting & Employee working from home - Waste generated in operations

Please explain how you have identified the GHG source, including major limitations to this process and assumptions made
We have declined to include a value of revenue per client for privacy reasons. We record scope 1, 2 and 3 emissions, however, we do not currently have the granular detail to determine exact emissions of the services provided to our customers due to the diverse range and nature of our operations. Our methodology in providing this information is a pro-rate calculation based on the revenue from services provided to each client as a percentage of total Wood revenue. This percentage is then applied to our total scope 1, 2 and 3 emissions to determine an estimated share.

Emissions in metric tonnes of CO2e
17.6

Uncertainty (±%)
10

Major sources of emissions
Air travel, Rail travel, non-company vehicle mileage, the well to tank emissions of fuel consumed and the Transmission and Distribution of purchased electricity are all based upon emissions reporting data; we also include direct emissions from our Martinez power plant in California under downstream leased assets, which again is based upon reported emissions data. In addition, as explained in our earlier scope 3 disclosure in CDP, we have estimated other categories of scope 3 emissions based on supplier category spend data in line with recognised methods of calculation. This includes: - Purchased goods and services - Capital goods - Upstream transportation and distribution - Employee commuting & Employee working from home - Waste generated in operations

SC1.2

(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).
Emissions allocated in SC1.1 are calculated as proportion of our total scope 1, 2 and 3 emissions. Those emissions are published in our annual report (page 54 of our 2022 annual report) and are externally verified by an independent third-party climate change consultant, in line with the requirements of ISO 14064-3.

Our 2022 annual report can be accessed here: https://woodplc.sharepoint.com/:v:/t/FALearningHub/ESiCcHcAz7xKraM6b9QeSPYBlcH4zRVFDebQf8jJ3EFGrw?e=mz9zBB

SC1.3

(SC1.3) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

<table>
<thead>
<tr>
<th>Allocation challenges</th>
<th>Please explain what would help you overcome these challenges</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diversity of product lines makes accurately accounting for each product/product line cost ineffective</td>
<td>Wood is a diversified business operating across a broad range of energy and materials markets in over 60 countries. The services we provide across these markets and geographies span the entire asset lifecycle and therefore are also very diverse in nature, including consulting; desktop concept designs; delivery of engineering, procurement and construction management; and operation and modification of large-scale and complex assets. Given the diverse nature of our services and the markets and geographies they are delivered in, it would be complex and impractical to accurately account for the emissions of each service in order to allocate emissions to clients.</td>
</tr>
<tr>
<td>Customer base is too large and diverse to accurately track emissions to the customer level</td>
<td>As noted above, we provide a diverse range of services across a broad range of markets and geographies. We also have a large client base with many of our clients receiving a range of our services. As such, it would be complex and impractical to accurately account for the emissions of each service in order to allocate emissions to clients.</td>
</tr>
</tbody>
</table>

SC1.4

(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?
No
(SC1.4b) Explain why you do not plan to develop capabilities to allocate emissions to your customers.

Our current focus is on deploying our resources to further develop our approach to managing our overall emissions.

We recognise that scope 3 forms the largest part of our total emissions and last year we commenced reporting of scope 3 to provide greater transparency over the drivers of these emissions. This has allowed us to initiate foundations during 2022 that will, in the future, help us to address our scope 3 footprint and our intention in 2023 is to advance discussions on a scope 3 reduction goal, in addition to our existing scope 1&2 reduction target.

In addition to our ongoing efforts to reduce our scope 1 and 2 emissions we will also continue to build on the foundations established in 2022 to begin to address scope 3. These actions in 2022 included the deployment of in-house online climate change training to our Supply Chain teams and our Tier 1 Suppliers.

SC2.1

(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

- Requesting member: U.S. General Services Administration - OMB ICR #3090-0319
- Group type of project: Please select
- Type of project: Please select
- Emissions targeted: Please select
- Estimated timeframe for carbon reductions to be realized: Please select
- Estimated lifetime CO2e savings
- Estimated payback: Please select
- Details of proposal

SC2.2

(SC2.2) Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?
No

SC4.1

(SC4.1) Are you providing product level data for your organization’s goods or services?
No, I am not providing data
